Message from the President

The Graduate University for Advanced Studies, SOKENDAI is a graduate university with no undergraduate programs that consists of departments housed in affiliated Inter-University Research Institutes and the School of Advanced Sciences attached directly to SOKENDAI. The Inter-University Research Institutes are research centers for joint use by universities throughout Japan in their various research fields. As such, these institutes serve as centers of advanced research in their respective research fields and as nodes of scholarly communication that support international joint research. The School of Advanced Sciences, which is located in Hayama and has no such parent institute, conducts advanced research into the evolution of life and the relationship between science and society.

SOKENDAI was founded in October 1988 on the internationally unprecedented idea of educating graduate students at outstanding centers of research to cultivate future generations of scholars. We are very happy to announce that we were able to successfully celebrate SOKENDAI’s 30th anniversary, in 2018.

At SOKENDAI, students are educated at Japan’s leading centers of research. Their lives are very different from those of students in graduate programs attached to ordinary undergraduate faculties, especially for students who enroll in our five-year programs straight from their undergraduate studies and pursue their graduate studies and research surrounded by professional researchers and scholars. Faculty outnumber students by more than two-to-one. Students have access not only to equipment and materials unavailable elsewhere but also to a community of top-ranked scholars. While this environment provides amazing opportunities for doctoral dissertation research, it may also be more stressful in some ways than an ordinary university.

This is why every department, with the full support of SOKENDAI, looks after its students and takes steps to ensure that time spent in the department is productive and enjoyable. All our students are encouraged to take full advantage of this distinctive research environment as they pursue their doctoral dissertation research.

“Advanced specialty and expertise”, “broad perspective” and “international competitiveness” have been the educational goals of SOKENDAI since its founding. As mentioned above, students are educated at centers of research, so “Advanced specialties and expertise” and “international competitiveness” are perhaps something they naturally learn. But what of a “broad perspective”? A “broad perspective” entails the ability to explain one’s object of research in the broader terms of human intellectual activity in general and to envision new horizons that transcend current disciplinary boundaries. Acquiring these abilities in the course of writing a doctoral dissertation can be hard. Still, I hope students will endeavor to gain this broader perspective at every opportunity by taking full advantage of SOKENDAI’s unique characteristics, including its various departments that collectively encompass a broad range of intellectual fields, from energy, materials, space and life to information, history and culture.

Universities and basic research in Japan today face challenging circumstances. Likewise, there are issues regarding SOKENDAI’s future growth as an institution of higher learning that need our serious attention. Yet, whatever difficult challenges may lie ahead in this uncertain age, we will face them each and every day as first-class researchers and scholars dedicated to working in cooperation with everyone concerned to produce future generations of global professionals.

April 1, 2020

Hasegawa, Mariko, Ph. D.
President
The Graduate University for Advanced Studies, SOKENDAI

Profile
Dr. Hasegawa joined The Graduate University for Advanced Studies, SOKENDAI as a professor in 2006. She went on to serve as a dean of Department of Evolutionary Studies of Biosystems in 2007, as a dean of School of Advanced Sciences in 2011, and then as an Executive Director in 2014. Dr. Hasegawa became President of SOKENDAI on April 1, 2017.
She earned her Ph.D. degree in Anthropology from Graduate School of Science, University of Tokyo. Before joining SOKENDAI, she worked at the Tanzania Wildlife Service, as an assistant at the Laboratory of Anthropology, Department of Biological Science, Graduate School of Science, University of Tokyo. She also taught as an associate professor and professor at Senshu University, as an associate professor at the Department of Anthropology at Yale University and as a professor at the School of Political Science and Economics, Waseda University.

Her research expertise includes Behavioral Ecology and Physical Anthropology, and she conducted research on wild chimpanzee, fallow deer and wild sheep in Great Britain, peafowl in Sri Lanka. Recently she is conducting research on human evolution and adaptation.

In 2008, she became President of the Human Behavior and Evolution Society of Japan and received the Hidaka Award from the Japan Ethological Society in 2012.
Main features of The Graduate University for Advanced Studies, SOKENDAI

Unique doctoral programs
• Education programs carried out at cutting-edge research institutes
• Tailor-made education programs
• Flexible education programs for working professionals and foreign students

Fostering advanced specialties and expertise
• Specialized education programs in diverse fields
• Supervision by leading researchers from each field
• Top-level collection of archives, equipment and facilities provided by Inter-University Research Institutes

Broadening perspective
• “SOKENDAI Freshman Course”, an intensive course for all first-year students
• Joint education among departments and schools
• Cross-disciplinary education through distance learning systems
• “Joint School Seminars” for interdisciplinary research exchanges among departments

Achieving international competitiveness
• Education at the hub of international research collaborations
• International Joint Diploma Programs
• SOKENDAI Student Dispatch Program
• Courses focused on academic communication

Creating advanced research fields
• Interdepartmental education programs
• International research collaborations coordinated by School of Advanced Sciences
• University-wide “Science and Society” education program
Purpose of Establishment

In recent years, there has been a strong demand for the promotion of original and international research and the opening up of advanced scientific fields that transcend the boundaries of existing scientific disciplines.

The Graduate University for Advanced Studies, SOKENDAI, the first of its kind in Japan, was established to cultivate researchers capable of responding to such demands. It offers the advantage of enabling students to carry out research in the most advanced research environment of Inter-University Research Institutes, which operate under the auspices of the Ministry of Education, Culture, Sports, Science and Technology (MEXT). These institutes conduct advanced research in a variety of fields, and play a central role in the promotion of joint research.

SOKENDAI was established to foster creative international researchers with wide-ranging vision who are capable of leading the latest trends in research. The University will promote original and international research and open up new scientific fields that transcend the boundaries of existing scientific disciplines.

Inter-University Research Institutes

Inter-University Research Institutes house large scale, high-technical facilities, high-level laboratories, or various academic data and archives. They are accessible for any university researchers who would collaboratively interact each other, using these facilities.

Have you ever heard, either on TV or in a newspaper, of the Subaru telescope, on the island of Hawaii, or of the observation vessel, SHIRASE, heading to the South Pole? Both of them are related to Inter-University Research Institutes, affiliated with SOKENDAI; the Subaru telescope was established by the National Astronomical Observatory, and the polar observation is carried out by the National Institute of Polar Research. Most of the research activities involve fundamental scientific studies which demand large-scale facilities and a large budget. Inter-University Research Institutes have a great number of researchers and a large amount of research grants are made available to carry out original and advanced scientific research.

Advanced Specialist Education in Research Facilities and General Education Cultivating Broad Views

Ph. D. programs at SOKENDAI provide an ideal education and research environment, offering direct access to large-scale or special experiment/observation facilities, as well as academic materials and data at world-class research institutes in Japan. In our Ph. D. programs, students can be in daily communication with cutting-edge researchers in Japan and abroad as one of the leading international research centers. Having 2–3 faculty members per student, SOKENDAI offers, in a custom-made manner, both advanced specialist education and general education cultivating broad views.

The Graduate University for Advanced Studies, SOKENDAI
History

June 1982
An informal committee of the directors general of international university research institutes issues an appeal for the introduction of postgraduate courses in the institutes.

April 1986
An informal committee of the directors general of inter-national university research institutes produces a summary of the basic concepts of a postgraduate school for advanced studies based on the results of an investigation by a working group set up to investigate issues related to postgraduate schools. An Office and Committee for the Investigation of the Preparation of the Establishment of a Postgraduate School for Advanced Studies are established at Okazaki National Research Institutes.

March 1987
The Committee for the Investigation of the Establishment of a Postgraduate School for Advanced Studies produces an interim summary on the preparation of the establishment of a tentatively named Graduate University for Advanced Studies.

May 1987
An Office and Committee for Preparation of the Establishment of a Postgraduate School for Advanced Studies are established at Okazaki National Research Institutes.

July 1987
The Committee for Preparation of the Establishment of a Postgraduate School for Advanced Studies produces an interim summary on the preparation of the establishment of a tentatively named Graduate University for Advanced Studies.

April 1988
An Office and Committee for Preparation of the Establishment of the Graduate University for Advanced Studies are established at Okazaki National Research Institutes.

May 1988
The "Law to amend part of the National School Establishment Law" (Law No. 63, 1988), which stipulates the establishment of the Graduate University for Advanced Studies, is announced and enacted.

September 1988
The Committee for Preparation of the Establishment of the Graduate University for Advanced Studies produces a summary of the preparation of the establishment of the Graduate University for Advanced Studies.

October 1988
The Graduate University for Advanced Studies is inaugurated. The central administration office is established at the Tokyo Institute of Technology (Nagatsuda Campus).

School of Mathematical and Physical Science
School of Life Science
Department of Mathematical Science
Department of Statistical Science
Department of Accelerator Science
Department of Molecular Biomechanics
Department of Structural Molecular Science
Department of Physiological Science
Department of Functional Molecular Science
(An informal committee of the directors general of international university research institutes issues an appeal for the introduction of postgraduate courses in the institutes.)

The university commences matriculation from April 1989. Dr. Saburo Nagai is appointed as the first President of the University.

April 1989
The School of Cultural and Social Studies is established.

January 1990
Dr. Eizi Hirota is appointed as the first Vice President of the University.

April 1990
The Coordination Center for Research and Education is established.

April 1992
The Department of Japanese Studies (School of Cultural and Social Studies), and the Departments of Astronomical Science and Fusion Science (School of Mathematical and Physical Science) are established; matriculation begins.

April 1993
The Department of Polar Science (School of Mathematical and Physical Science) is established; matriculation begins.

February 1994
Land in Hayama, Kanagawa (27,000m²), is donated by Mitsui Fudosan Ltd. to allow the construction of the University’s central administration office, as a result of the mediation services of the Kanagawa prefectural government.

March 1994
Construction of the central administration office (4,205m²) begins at the Hayama Campus.

June 1994
The Information Center for Research and Education is established.

February 1995
Administrative functions are transferred from Nagatsuda Campus to Hayama; construction is completed on the central administration building.

April 1995
Dr. Eizi Hirota is appointed as the second President. Dr. Kazuo Moriwaki is appointed as the second Vice President.

April 1997
The School of Advanced Sciences, with the Department of Biosystems Science, is established at the Hayama Campus (matriculation begins in April 1999).

April 1998
The Department of Photonscience (School of Advanced Sciences) is established (matriculation begins in April 1999). The Department of Synchrotron Radiation Science (School of Advanced Sciences) changes its name to "The Department of Materials Structure Science".

September 1998
Construction of the School of Advanced Sciences building for research (3,060m²) begins at the Hayama Campus.

April 1999
The School of Cultural Studies changes its name to "The School of Cultural and Social Studies". The Department of Japanese History is established in the School of Cultural and Social Studies, and The Department of Particle and Nuclear Physics is established in the School of Mathematical and Physical Science; matriculation begins in both new Departments. The School of Advanced Sciences commences matriculation.

June 1999
Construction completed on the research building for the School of Advanced Sciences.

April 2001
Dr. Keichi Koda is appointed as the third President. Dr. Naoyuki Takahata is appointed as the third Vice President. The Department of Cyber Society and Culture (School of Cultural and Social Studies) is established; matriculation begins.

January 2002
Library construction completed.

February 2002
The Department of Informatics established in the School of Mathematical and Physical Science; matriculation begins.

April 2003
The Department of Japanese Literature (School of Cultural and Social Studies), and the Department of Space and Astronautical Science (School of Mathematical and Physical Science) are established; matriculation begins.

October 2003
The National University Corporation Law (Law No. 112 of 2003) is promulgated and enforced.

April 2004
Reformation into the National University Corporation, Graduate University for Advanced Studies Dr. Keichi Koda is reappointed as the President of the University. The School of Mathematical and Physical Sciences is reformed into three schools: the School of Physical Science (including the departments of Structural Molecular Science, Functional Molecular Science, Astronomical Science, Fusion Science and Space and Astronautical Science), the School of High-Energy Accelerator Science (including the departments of Accelerator Science, Materials Structure Science, Particle and Nuclear Physics), and the School of Multidisciplinary Science (including the departments of Statistical Science, Polar Science and Informatics). The School of Life Science has reformed a three-year doctoral program into a five-year doctoral program.

April 2005
The name of the Department of Molecular Biomechanics at the School of Life Science has changed to the Department of Basic Biology.

April 2006
The School of Physical Sciences, the School of High-Energy Accelerator Science, and the School of Multidisciplinary Sciences have implemented the five-year doctoral program system. The Schools have begun to accept students.

April 2007
The School of Advanced Sciences is reorganized to establish the Department of Evolutionary Studies of Biosystems (providing a five-year doctoral program), in stead of its two existing departments, the Department of Biosystems Science and the Department of Photo Science (providing three-year doctoral programs), matriculation begins.

April 2008
Dr. Naoyuki Takahata has been appointed as the fourth President.

April 2009
The Department of Cyber Society and Culture has stopped accepting new students.

March 2010
Construction of the Center for the Promotion of Integrated Sciences (1,033m²) begins at the Hayama Campus.

April 2010
The name of the Hayama Center for Advanced Studies has changed to the Center for the Promotion of Integrated Sciences.

January 2011
Construction of the Center for the Promotion of Integrated Sciences is completed.

Information Services and Technology Center is established.

Dr. Yasunobu Okada has been appointed as the fifth President.

July 2015
The Center for Academic Information Services is established by unification of the University Library and the Information Services and Technology Center.

March 2017
Department of Cyber Society and Culture abolished. (Dept. operation period from 2001.4.1 to 2017.3.31)

May 2017
Dr. Mariko Hasegawa has been appointed as the sixth President.

April 2018
The Center for Educational Development is established.

April 2018
The Center for the Promotion of Integrated Sciences is abolished. SOKENDAI Tokyo Branch is established at Tokyo Institute of Technology, Campus Innovation Center (Minato-ku, Tokyo)

Research and Education System

SOKENDAI has 6 schools and 20 departments. School of Cultural and Social Studies, School of Physical Sciences, School of High Energy Accelerator Sciences, School of Multidisciplinary Sciences and School of Life Science together hold charge of 19 departments, which are housed in 18 affiliated research institutes and operated by 4 Inter-University Research Institute Corporations and Japan Aerospace Exploration Agency. School of Advanced Sciences, which is attached directly to

SOKENDAI Headquarters and does not have a parent institute, has one department to conduct research into the evolution of life and the relationship between science and society. In addition, the University Library, The Center for Educational Development and The Center for Academic Information Services have been established as university-wide facilities for all 6 schools.
School of Cultural and Social Studies

By providing comprehensive research and educational programs on the human cultural activities and the relationship among human, society, technology and nature, the School aims to encourage outstanding researchers who can compete internationally and can offer broad perspectives as well as those who can contribute to the society by using advanced research techniques in which they were trained.

School of Cultural and Social Studies

The School of Cultural and Social Studies is the only humanities school at SOKENDAI. The School is comprised of the following five departments affiliated with 4 research institutes: Department of Regional Studies and Department of Comparative Studies affiliated with National Museum of Ethnology, Department of Japanese Studies affiliated with International Research Center for Japanese Studies, Department of Japanese History affiliated with National Museum of Japanese History and Department of Japanese Literature affiliated with National Institute of Japanese Literature.

The School not only conducts study and research at each research institute, but also conducts collaborative activities as an entire school. The School is playing an important role of conducting cultural and social studies at SOKENDAI based on a wide variety of academic expertise, and is disseminating the study achievements through methods such as publishing the academic journal “SOKENDAI Review of Cultural and Social Studies”, holding the interdisciplinary exchange program “SOKENDAI Cultural Forum” hosted by each institute in rotation, and implementing the special education program “Academic Resource Management Course”.

In addition, the School only accepts students for the second term of a five-year system.

Departments under the School

- Department of Regional Studies
- Department of Comparative Studies
- Department of Japanese Studies
- Department of Japanese History
- Department of Japanese Literature

Dean

Ikeya, Kazunobu

Special field
Anthropology, Geography, Biosophia Studies
Department of Regional Studies

The Department, affiliated with the National Museum of Ethnology, Japan, offers opportunities for comparative studies of social systems, religion, technology, languages, art and cultural resources. Students are expected to explore similarities and differences in time and space and to explore new directions in the study of society and culture. The Department has the advantage of access to extensive collections of artifacts, audio-visual records and documentary materials. The Department nurtures researchers who can develop new research areas by combining anthropological methods with the findings of related fields.

Department of Comparative Studies

The Department, affiliated with the National Museum of Ethnology, Japan, offers opportunities for comparative studies of social systems, religion, technology, languages, art and cultural resources. Students are expected to explore similarities and differences in time and space and to explore new directions in the study of society and culture. The Department has the advantage of access to extensive collections of artifacts, audio-visual records and documentary materials. The Department nurtures researchers who can develop new research areas by combining anthropological methods with the findings of related fields.

Department of Japanese Studies

The Department of Japanese Studies is organized as a single administrative unit in order to facilitate the international and interdisciplinary pursuit of Japanese studies encompassing the humanities, social sciences, as well as natural sciences. A special feature of our graduate study program is that all the faculty participate in teaching and research guidance.

The department requires graduate students to take three courses—“Theory and Methodology in Japanese Studies”, “Interdisciplinary Research” and “Dissertation Writing Guidance”—which set forth the theoretical and methodological basis for conducting Japanese studies in global perspective. Through these courses and directed research, we hope to foster researchers with creative and highly specialized perspectives who are equipped to undertake comprehensive approaches of a broad interdisciplinary nature crossing the lines of multiple fields of study.

Library
We acquire basic books and periodicals published both in and outside of Japan.
Department of Japanese History

In the Department of Japanese History, which has the National Museum of Japanese History as its parent institute, researchers specializing in history, archaeology, folklore and allied disciplines including natural science, provide educational and research opportunities, including fieldwork, from interdisciplinary viewpoints. The most distinctive feature of the Department is that the students can use materials that are stored in the Museum, as well as various tangible and intangible information resources and advanced equipment for scientific analysis. The Department aims to foster researchers who are highly capable of comprehensive material-based analysis of Japanese history and culture and individuals who contribute to society with their broad and international perspectives.

Lecture utilizing museum collection
About 300,000 of historical, folkloric and archaeological artifacts as well as advanced research facilities can be made of.

Department of Japanese Literature

The pillars of education in the Department of Japanese Literature are to attain deep expertise on Japanese literature and related fields as well as investigative techniques and comprehensive analytical skills for related materials, while utilizing the cultural resources of the National Institute of Japanese Literature, a fundamental organization and pioneering inter-university research institute that compiles and researches vast amounts of academic information based on investigation of original materials. We offer courses from a systematic curriculum with a focus on Japanese literature and an eye to a wide range of fields while also providing research guidance under multiple faculty members in order to develop researchers with advanced expertise and human resources who can contribute to society through their research results.

Library
About 200,000 microfilms, 20,000 Japanese rare books and other materials related to Japanese literature are stored in the institute’s library.

School of Physical Sciences

The School of Physical Sciences conducts education and research in physical sciences relating to material, space, energy and life. The five departments that constitute the School have been located at four Inter-University Research Institutes: the Institute for Molecular Science, the National Astronomical Observatory of Japan, the National Institute for Fusion Science and Institute of Space and Astronautical Science. These Institutes house special and large equipment impossible for general universities to accommodate, and they have implemented a great number of large-scale and internationally advanced research projects. The School is open to many foreign researchers, including visiting faculty members, postdoctoral fellows and students, and thus offers a highly international environment. In this excellent research environment, students experience the frontiers of physical science and devote themselves to study and research, striving to create the science of the future by themselves. The School provides a tutoring system in which at least two faculty members are assigned per student, allowing practical research with one-on-one guidance. In addition, a research assistant (RA) system has generously supported students financially and created an environment in which they can concentrate on their study and research. We hope that many motivated students will enroll in the School and grow into researchers who will play major roles in the future of physical science.

Departments under the School

- Department of Structural Molecular Science
- Department of Functional Molecular Science
- Department of Astronomical Science
- Department of Fusion Science
- Department of Space and Astronautical Science

Dean
Namiki, Noriyuki

Special field
Planetary Science
Department of Structural Molecular Science

Education and research are primarily concerned with a systematic unveiling of the static as well as dynamic properties of materials through real images of molecules and molecular assemblies deduced from detailed structural analyses. Advanced training and research are conducted in the field of structural molecular science with the use of new methods for detecting and analyzing dynamic structures, in addition to a variety of traditional spectroscopic and theoretical techniques for structural analysis.

Electronic states studied by photoelectron spectroscopy

Department of Functional Molecular Science

Education and research are primarily directed towards, firstly, unveiling the underlying mechanisms of various functions of materials at the atomic or molecular level, and secondly, the design and generation of new functional properties of molecules and molecular assemblies. Advanced training and research are conducted in the field of functional molecular science with an emphasis on the development of modern techniques for functional analysis and novel theoretical approaches.

Purification of proteins by high-performance liquid chromatography

Department of Astronomical Science

The Department carries out advanced education and research through a wide range of observational and theoretical researches using state-of-the-art facilities like Subaru Telescope in Hawai’i, the ALMA radio telescope in Chile, and supercomputers. According to the interest, students can learn the observational and theoretical astronomies and application of cutting-edge technology as well as the design, fabrication and testing of new observational instruments, development of new methods of data acquisition and analysis, and public outreach.

Subaru Telescope is located on the summit of Mauna Kea, a dormant volcano on the Big Island of Hawai’i.
Department of Fusion Science

To develop fusion power for a future energy source, it is necessary to research plasma physics through a complementary approach of both experimental and theoretical studies. In this department, students learn the experimental methodology as well as engineering requirements for investigating high temperature plasma, and also learn computer simulation techniques for revealing the nature of complicated fusion plasmas.

Department of Space and Astronautical Science

The Department of Space and Astronautical Science provides an opportunity for high-level education and advanced research through the theoretical study, the analysis of acquired data, and the practice of advanced R&D in Astrophysics, Solar System Sciences and Space Engineering. The main feature of each major is as follows.

- **Astrophysics** is to elucidate the origin, structure and evolution of the universe based on the observations from space.
- **Solar System Sciences** is to understand the origin and evolution of a variety of environments, including the prebiotic materials, by examining the present status and samples of past days.
- **Space Engineering** is to lead the future space development by providing innovative space technology. New space technology enables challenging missions in the above two scientific activities.

In addition, it is expected to cultivate not only depth of knowledge in Space Science but also the planning skills for space projects by touching on the most advanced and complex space projects.
School of High Energy Accelerator Science

The School of High Energy Accelerator Science provides opportunities for graduate students to carry out experimental and theoretical research on elementary particles and on materials structure and functions. The School also encourages them to engage in the research and development of novel and high performance accelerators. In addition, the School aims to foster the creative researchers who will push the frontiers of science and contribute to the good of society.

School of High Energy Accelerator Science

The School of High Energy Accelerator Science consists of three departments: the Department of Accelerator Science, the Department of Materials Structure Science, and the Department of Particle and Nuclear Physics. These departments are affiliated with the Accelerator Laboratory (and the Applied Research Laboratory), the Institute of Materials Structure Science, and the Institute of Particle and Nuclear Studies in the High Energy Accelerator Research Organization (KEK).

In the Department of Particle and Nuclear Physics, accelerator based high energy physics experiments through international collaborative projects as well as advanced theoretical research are performed in order to study and understand the origin of the cosmos and the ultimate structure of matter. In the Department of Materials Structure Science, structures of hard to soft materials and their functions are studied not only from a fundamental interest but also from an application point of view. KEK develops and operates high-energy accelerators which provide various particle beams such as protons, electrons, positrons, neutrons, X-rays, neutrons and muons. In the Department of Accelerator Science, principles and components of the accelerator complexes are studied. The education programs are based on variety of research activities pursued by KEK, which provide wide range of graduate education for students.

Departments under the School

- Department of Accelerator Science
- Department of Materials Structure Science
- Department of Particle and Nuclear Physics

Dean
Iso, Satoshi

Special field
Particle Physics, Theoretical Physics
Department of Accelerator Science

High-energy particle accelerators are extremely powerful tools for exploring a wide range of building blocks and structures found in nature, from elementary particles and atomic nuclei to atoms, molecules and even complex living organisms. In addition, beyond the field of natural science, applications of particle accelerators are being actively pursued in the fields of industry and medical science.

In the Department of Accelerator Science, students can conduct both theoretical and experimental research on the principles of accelerators and their related leading edge technologies, and thereby endeavor to further advance natural science through the development of particle accelerators. Closely related subjects, such as radiation science, computer science, superconductivity engineering, and mechanical engineering can also be studied.

Department of Materials Structure Science

In Department of Materials Structure Science, leading edge researches on structures, functions and characteristics of hard to soft materials are pursued.

The research studies concerning physics, chemistry, biology, engineering, agriculture and medical science are performed by the use of advanced beams such as synchrotron radiation, neutrons, muons and slow positron, which are provided by state-of-the-art particle accelerators.

Developing novel technologies for beam production and its utilization to make major contributions to materials science are also included in our research fields.

We will offer education programs and experimental opportunities to our students who will aim for clarifying the Nano World.

Department of Particle and Nuclear Physics

Both particle physics and nuclear physics are among the most fundamental areas of basic science, and they are the sources of new frontiers in physical concepts and methods that are the basis of modern science; these subjects involve the pursuit of the most fundamental principles of nature and the exploration of the basic structure and building blocks of matter.

In this department, we conduct both theoretical and experimental researches in particle and nuclear physics. The theoretical investigations include not only those in particle and nuclear physics but also those in cosmology and astrophysics. The experimental investigations are conducted by means of colliding beam accelerators and various beams from high-intensity proton accelerators. In addition, related research in physics, including the R&D of new devices, methods and their applications, is pursued in a versatile manner.

The School of Multidisciplinary Sciences conducts research and education on important issues relating to changes of the Earth, environment and human society. The School strives to cultivate researchers and highly specialized professionals in the area of information and system sciences, who will play key roles in research and/or development skills that will contribute to solving these issues.

School of Multidisciplinary Sciences

The School of Multidisciplinary Science conducts research and education on complicated natural and social phenomena, as systems that govern the occurrences, functions, and interactions of these phenomena, from the comprehensive and transdisciplinary viewpoint. Through such research and educational activities, the School aims to nurture researchers and highly specialized professionals in the area of information and systems who will take the lead in academic research and address various important issues relating to changes in human society in the 21st Century. The School, consisting of the Department of Statistical Science, the Department of Polar Science, and the Department of Informatics, has been involved in multidisciplinary research fields from the beginning. In addition, the School further strives to enhance its research and education by promoting close collaboration between the Departments by, for example, setting common subjects in curricula. The School covers diverse research subjects but studies the principles of multidisciplinary science, research approaches, and methodologies as an essential part of the School’s research and education activities. The Department of Statistical Science and the Department of Informatics seek to determine the common probability or complexity among various phenomena by statistical mathematica and data analysis. The Department of Polar Science studies the geophysical and the biological complex system in the polar regions of extremes on Earth and approaches its subject from the viewpoint of multidisciplinary science. By continuing to explore new research fields, including advanced and leading research fields, and systematizing them through such activities, the School strives for further development of the multidisciplinary sciences.

Departments under the School

- Department of Statistical Science
- Department of Polar Science
- Department of Informatics

Dean
Miyasato, Yoshihiko

Special field
Control Theory
Department of Statistical Science

The Department of Statistical Science is operated by the Institute of Statistical Mathematics, which has made great achievements in statistical science, including the Akaike information criterion, and has been contributing to the development of statistical science not only in Japan but also in the world.

This department conducts education and research on theory and applications to extract information and knowledge from the real world based on data, and aims to develop human resources with creative research capabilities solving various important issues that are complexly intertwined.

Department of Polar Science

The Earth is the only one aqua-planet in the Solar system. Many kinds of organism including mankind have been living on it. When we long for sustainable development on this planet, we have to better understand evolution and change of its environments. Recently, we come to realize that environmental change of the Earth, in each aspect of ionosphere, atmosphere, hydrosphere, geosphere and biosphere, appears in advance from both polar regions. The objectives of Department of Polar Science are to study characteristics of the changes and their relation in the framework of the seamless Earth system. Polar Science stands strongly on the fieldwork; therefore we attach importance to educate or study together practical methodology to carry out the research.

We train ‘Earth scientists’ who are creative and flexible in studying the past, current and future figure of the Earth.

Department of Informatics

Informatics is a new science field which extensively and synthetically deals with problems on information from various aspects. It is a multidisciplinary science covering not only traditional information science and engineering, but also artificial intelligence and data science indispensable in the recent data-driven society, and even humanity informatics and social informatics. It includes expression, collection, circulation, management, processing, understanding, and usage of information as well as the information technology to support them. The department of Informatics aims to foster researchers and highly skilled professionals with ability in broad range from foundations to practices and advanced specialty by utilizing cutting-edge research environment and cyber science infrastructure of the National Institute of Informatics in an international atmosphere with many active researchers and students from various countries.

School of Life Science

The School of Life Science aims to cultivate researchers who are internationally competitive and possess broad perspectives necessary for taking on leading roles in the life science research of the next generation. Students participate in research to clarify life phenomena at various levels from the molecular to the individual to the population.

School of Life Science

The School of Life Science aims to educate researchers who are internationally extraordinary and possess creativeness and broad perspectives to explore new fields of Life Science. Professors in this school cover wide fields of Life Science from the molecular to organismal and population levels.

The School of Life Science offers graduate programs that are aimed at nurturing independent and creative researchers that expand the frontiers of life science. Three departments that constitute the School of Life Science are based on three leading research institutions — National Institute of Genetics, National Institute for Basic Biology, and National Institute for Physiological Sciences. Research activities of these institutes cover variable fields of Life Science and the School of Life Science aims to provide research environments in which students can learn interdisciplinary concepts as well as their own specialty. Housing the largest number of life science faculty in Japan, the School of Life Science offers a mentoring system by multiple faculty, and provides a superb environment for independent research by each student. The graduate course provides not only lectures by outstanding internal professors but also seminars on the latest research progress conducted by external researchers, educational programs for cross-disciplinary approaches, and courses on scientific writing and presentation. The three departments hold a joint retreat every year for scientific interactions and share lectures over the internet for further enhanced interactions. We welcome students who love and enjoy Life Science, and dream to open new windows into the field.

Departments under the School

- Department of Genetics
- Department of Basic Biology
- Department of Physiological Sciences

Dean

Fujimori, Toshihiko

Special field
Developmental Biology

**Department of Genetics**

The Department of Genetics offers education and research opportunities in a variety of cutting-edge disciplines with the goal of investigating biological phenomena on the basis of genetic information. Study and research fields include molecular, cellular, developmental, behavioral, population, and evolutionary genetics, as well as genome biology and bioinformatics. Students can take advantage of a wide range of databases and genetic resources hosted by the National Institute for Genetics. To nurture independent researchers, the Department of Genetics adopts an educational philosophy that the academic guidance of each individual student is carried out by the entire faculty. For example, graduate students meet with their thesis committee twice a year to receive advice from faculty members outside their host labs. Other features of the Department include the Scientific Presentation/Writing Program and ample financial assistance opportunities such as our research assistant program.

![Rich environment of the Department of Genetics allows students to fully devote themselves to their own research projects.](image)

Lively discussions are often held in the laboratories.

**COURSES**

- Molecular and Cellular Biology
- Developmental Biology
- Evolutionary Biology
- Genome Biology

For inquiries or information:

E-mail: info-soken@nig.ac.jp

---

**Department of Basic Biology**

The Department of Basic Biology trains researchers capable of developing innovative approaches and creative ideas to understand higher order phenomena in biological science. Students take advantage of the environment and facilities of the National Institute for Basic Biology. Students conduct a PhD research project with taking a variety of advanced classes and advices from several professors with different specialities. Research fields in this department cover cell biology, developmental biology, environmental biology, neurobiology, symbiotic biology and evolutionary biology, with appropriate model organisms and top-end techniques including molecular biology, bioimaging, mathematical science and omics.

**COURSES**

- Cell Biology
- Developmental Biology
- Environmental Biology
- Neurobiology
- Evolution, Diversity and Genomic Biology
- Reproductive Biology

For inquiries or information:

E-mail: r7139@orion.ac.jp

---

**Department of Physiological Sciences**

Physiology is to clarify the mechanisms of living bodies from both elements (cells and molecules) and systems, and therefore provides important basic knowledge necessary for understanding pathological conditions. Importance of physiology has been much increased upon clarification of genome structures. In this department, students can learn the function of intact organisms in an integrated way from molecular / cellular levels as basic units of living organisms to whole body levels, and are expected to be pioneering researchers in bioscience, neuroscience and medicine.

![Cells, tissues and organs which researchers in Department of Physiological Sciences are working on using different experimental procedures](image)

**COURSES**

- Molecular and Cellular Physiology
- Homeostatic Regulation
- Fundamental Neuroscience
- System Neuroscience

For inquiries or information:

E-mail: r7139@orion.ac.jp
School of Advanced Sciences

Based on SOKENDAI’s founding principles and purposes, the School aims to accomplish world-class academic research beyond the borders of conventional academic fields through interdisciplinary approaches. Additionally, we strive to develop transdisciplinary and advanced academic fields and to produce researchers who have broad perspectives and a high level of expertise that is globally competitive.

School of Advanced Sciences

The School of Advanced Sciences is a school with just one department: the Department of Evolutionary Studies of Biosystems. Our mission is to perform research and education in the fields of evolution and science and society. The evolution section focuses on the diversity and evolutionary history of organisms, and consists of four subsections: integrative anthropology, behavioral biology, evolutionary biology and theoretical biology. The science and society section studies the roles and responsibilities of scientists within society, from the viewpoint that science is a social activity of humans. Students carry out Ph.D. research in their own field, but are also required to write a subthesis in the other one: biology students write a subthesis on science and society, and vice versa. The barriers between laboratories have been removed as far as possible, which makes for an intense, intimate educational environment for all students and faculty. We thus hope that all of our students will become competent and well-balanced researchers / professionals.

We also actively promote international and domestic collaborations with other universities and research institutes, to plant the seeds for fruitful future research fields.

Departments under the School

- Department of Evolutionary Studies of Biosystems

Dean

Sasaki, Akira

Special field

Mathematical Biology
Department of Evolutionary Studies of Biosystems

Vision for future through novel perspectives on life

Studying biological organisms, humans and society from broad perspectives, our department is designed to develop deeper understanding on nature through evolutionary studies of biosystems and meta-consideration of science. Our education and research program focus on the biological phenomena with evolutionary perspectives and the relationship between science, technology, and the society. We thus aim to train independent researchers who can contribute for building sustainable society with their expertise and broad perspectives.

COURSES

- **Major in Biology**
  - Anthropology / Evolutionary Biology / Behavioral Biology / Advanced Theoretical Biology

- **Major in Science and Society**
  - Social Studies of Science

4 : Archives of Japanese scientists who worked in Taiwan during wartime
5 : Handling DNA solutions in the wet lab.
Educational Programs

SOKENDAI Freshman Course

The Freshman Course is an intensive course (4 days camp) for newly-enrolled students of SOKENDAI. This course has two objectives: (1) To acquire basic knowledge and skills required for all researchers; and (2) To understand the SOKENDAI’s broad range of intellectual fields, and create a network beyond your research field. This course consists of three sections: “Exploring Diversity in Academia (EDA)”, “Researchers and Society” and “Communication Skills for Researchers”.

Course Groups

A course group is a cluster of courses categorized across a wide spectrum of specific areas that are intimately related to each other. In some course groups, a coalition of schools/departments bring along their own courses to build up the group; students can enjoy special subjects of an adjacent academic discipline to broaden their perspective, quickly grasp a general idea of each discipline and/or get an objective overview of various disciplines.

2020 Course Groups

Integrative Brain Science Course

Brain science requires a wide range of knowledge and view not only on physiology, but also on biology, technology, pharmacology, information science and social science. This course will provide lectures and practices for the purpose of integrating multidisciplinary approaches and developing a new research field.

All the lectures will be broadcasted through our remote lecture delivery system except training course.

Integrative Bioscience Education Course

To foster the development of young researchers who can contribute to the future of biology in connection with the recent developments of various technologies, we provide a new course that promotes interdisciplinary and integrative views of biological processes, covering not only biological but also physical, mathematical, and information sciences.

All the lectures will be provided through the remote lecture delivery system except training course.

Courses common to the School of Physical Sciences and the School of High Energy Accelerator Science

Utilizing research topics and themes common to both schools and their departments, the schools provide the courses mainly to students with academic background or fundamentals in Physical Sciences. The courses aim to help students cultivate the basic skills, interdisciplinary and integrated perspectives on nature essential for researchers.
“Science and Society” Program

School of Advanced Sciences has been leading a program to develop graduate education in “science and society”. Since the university’s primary mission is to train professionals who have leading expertise as well as broader perspectives, we hope our young scientists develop abilities to grasp science as part of social activities and to think critically about social dimensions of scientific practice including social implications and impacts of research activities and infrastructure supporting scientific research. Therefore the program designs and provides courses on “science and society”. As part of the activities, we offer a 1.5-day program, “Researchers and Society”, within the Freshman Course twice a year (in Japanese and English).

Historical and Cultural Resource Management Education Program

The historical and cultural resource management course is led by the School of Cultural and Social Studies and aims to develop researchers with a high capability in historical and cultural resource management through learning about advanced historical and cultural resource management such as methods for reading diverse historical and cultural resources, analysis using advanced scientific methods, recording and scientific preservation management of historical and cultural resource information, and research presentations using historical and cultural resources.

Course-by-Course Education Program to CultivateResearchers in Physical Science

The Program is provided jointly by the School of Physical Sciences and the School of High Energy Accelerator Science. It seeks to foster researchers in the field of physical sciences who are fully equipped with a high degree of professional qualities as well as broad perspective and international competence to meet the needs of society. In the 1st to 2nd years of the 5-year doctoral course, the Program focuses on building basic academic skills at the graduate school level. In the 3rd to 5th years of the 5-year doctoral course students are placed according to their aptitude into one of the following four courses: Basic Course*, Advanced Research Course, Project Research Course (available only in the School of Physical Sciences), and Development Research Course (available only in the School of Physical Sciences).

*For students matriculating in AY2018 or later, course completion in the “Basic Course” has been discontinued.
Joint School Seminars

SOKENDAI Cultural Forum / School of Cultural and Social Studies

November 30-December 1, 2019 at National Institute of Japanese Literature

The forum is an event for academic exchanges organized by SOKENDAI’s only liberal arts department, School of Cultural and Social Studies. Centering “culture” as a common focus, it offers a forum for interdisciplinary exchanges among faculties and students of various majors from inside and outside of the university. As it provides a place to publish their research, the event functions as an educational opportunity for the students to present their research works and achievements and to learn presentation skills at the same time. Through these activities, the project also serves as a gateway for academic interactions between art and science students. Furthermore, by involving students in the planning and organization of the event, students can exercise their planning skills and receive advices and supports from faculties on project management through the collaboration, which in turn would facilitate students’ ability as independent researchers.

Physical Science Student Seminar / School of Physical Sciences and School of High Energy Accelerator Science

July 12-13, 2018 at Nobeyama Radio Observatory

School of Physical Sciences and School of High Energy Accelerator Sciences organize the multidisciplinary Physical Science Student Seminar as a part of their course curriculums. Every two years, students and faculties from eight majors join in this overnight event to hold academic seminars. The project authorizes students to take responsible roles in the planning and organization of the event in order to polish their planning and organizing skills and train them as highly competent researchers.

Multidisciplinary Sciences Cross Talks / School of Multidisciplinary Sciences and School of Life Science (Department of Genetics)

December 10-11, 2019 at Shizuoka Prefecture

At the “Young Researchers Cross Talks” hosted by Research Organization of Information and Systems and co-sponsored by School of Multidisciplinary Sciences, members of School of Multidisciplinary Sciences and Department of Genetics, as well as faculties and students from a variety of fields in SOKENDAI, join together to hold group discussions throughout this overnight event. Through group discussions and presentations on multidisciplinary topics with the presence of local and international faculties and students from various fields of study, students are expected to acquire higher expertise, wider perspectives, and international competency.
Life Science Retreat / School of Life Science & School of Advanced Sciences

December 15-16, 2019 at Yamanashi Prefecture

Life Science Retreat invites biology faculties and students for academic interactions, through which it aims to foster talents with a broader grasp of biological science and the capacity to contribute to the development of the field. English is used throughout the conference to improve the participants’ international caliber. Students plan and coordinate research presentations (oral and poster) and opinion exchanges. In the project, student organizers are expected to polish planning skills through the preparation and exercise presentations skills.

SOKENDAI Student Dispatch Program

This program encourages SOKENDAI students to seek a short-term research opportunity abroad and/or a long-term collaborative research project in and outside Japan that may lead to their career in the future. The program follows the educational goals of SOKENDAI, “advanced specialties and expertise”, “broad perspective”, and “international competitiveness”, and intends to financially support such research opportunities of SOKENDAI students.

2019
Category 1 (Short-term Abroad Program)
Number of students supported: 31
Category 2 (Long-term Abroad Program)
Number of students supported: 19
Category 3 (Long-term Domestic Program)
Number of students supported: 2
Dispatched countries: USA, UK, Australia, China, Germany, France, Italy, Czechia, etc.

SOKENDAI publication grant for research papers

The publishing cost support of the printing expenses is carried out for about the academic paper which was a result of the research activities. This support is applicable only for the students who belong to SOKENDAI. Total 18 publications were supported in 2019.
Society and Community Outreach Activities

Community Programs

We communicate the outcomes of the University's educational and research activities and give back to the community, with the aim to promote and spread the arts and sciences, as well as promote excellent research findings.

**April 3, 2019**  
Shonan Village Seminar  
*Thinking of a Prosperous Life*  
Hasegawa, Mariko (SOKENDAI President)  
Ogawa, Yujirô (SOKENDAI Executive Director)

**May 3, 2019**  
Shonan Village Festival 2019  
*Human Evolution: Environment, Culture, and Genome*  
Satta, Yoko (Professor, Department of Evolutionary Studies of Biosystems)

**July 31, 2019**  
Science Seminar for Junior High and High School Students  
*From “Hayabusa” to “Hayabusa 2”: The Mystery of the Solar System Explored from Fragments of Asteroids*  
Komatsu, Mutsumi (Assistant Professor, The Center for Educational Development)

**November 20-22, 2019**  
SOKENDAI Outreach Activities  
*Introduction to Project Management*  
Sakakibara, Satoru (Professor, Department of Fusion Science)

**December 23-25, 2019**  
SOKENDAI Outreach Activities  
*Challenges in the Exploration of the Unknown: Cutting-edge Studies Young Researchers Discuss*  
Oishi, Masatoshi (Professor, Department of Astronomical Science)

**February 24, 2020**  
SOKENDAI Seminar  
*Exploration “Q”: The Mysteries of the Universe Explored Through Cosmic Rays*  
Yoshioka, Mizuki (Associate Professor, Kyushu University Research Center for Advanced Particle Physics)

**March 7, 2020**  
Café Integral  
*Seven Types of Monkeys on One Island: Diversification of Sulawesi Macaque Monkeys*  
Terai, Yohei (Assistant Professor, Department of Evolutionary Studies of Biosystems)

**“Yokoko Academia” with Kanagawa Prefectural Yokosuka High School**  
We supported the academic program, “Yokoko Academia” organized by Kanagawa Prefectural Yokosuka High School to contribute to local educational institutes and foster future generations. The school is designated as a Super Science High School by the Ministry of Education, Culture, Sports, Science and Technology.

*Postponed due to the spread of the COVID-19.*

---

Academic Lectures hosted by the School of Advanced Sciences

From various on-going studies, the School selects themes relating to “life and evolution” and organizes academic lectures that deliver findings from cutting edge research to the general public and help to create deeper communication with people in the local communities.

**November 3, 2019**

**Lecture**  
*Exploring the World of Butterflies: The Forefront of Research on Insects’ Visual Sense*  
Arikawa, Kentaro (Professor, Department of Evolutionary Studies of Biosystems)

**Lecture**  
*The Mystery of Dance of Cranes: An Ethological Experiment*  
Takeda, Kohei (Research fellow, Department of Evolutionary Studies of Biosystems)

Press Release

Research findings in 2019 published on the following papers are press released and subsequently appeared in newspapers and various media:

- Astronomers Capture First Image of a Black Hole — Japanese researchers contribute to paradigm-shifting observations of the gargantuan black hole at the heart of distant galaxy Messier 87.
- Developmental effects on behavioural response for social preferences in frog tadpoles, *Rana ornativenter*.
- Genome-wide SNP analysis of Japanese Thoroughbred racehorses.
- The oldest record of an astronomical phenomenon in Japan was of a fan-shaped aurora described in the Nihon-shoki.
- Inter-group aggressive interaction patterns indicate male mate defense and female cooperation across bonobo groups at Wamba, Democratic Republic of the Congo.
- A multivariate phylogenetic comparative method incorporating a flexible function between discrete and continuous traits.
- Spectral organization of the compound eye of a migrating nymphalid, the Chestnut tiger butterfly, *Parantica sita*.

JSPS Summer Program

Date : June 12 – August 21, 2019

This program, which is carried in partnership with Japan Society for the Promotion of Science (JSPS), offers opportunities to practice research at inter-university research institutes (IURI) or universities to young researchers who have undertaken or just completed doctoral programs for two months during the summer. SOKENDAI provides an orientation session during the first week of the program in Hayama. It comprises Japanese language lessons, special lectures on Japanese culture and research, and a poster session in which SOKENDAI students will also participate. The objective of this program is to inject an international element into the education at the University and to promote academic exchange with other countries.

SOKENDAI Students’ Seminar on Skills for Poster Presentation

Lectures for the purpose of obtaining practical abilities to internationally appeal attractiveness of research are held every two years targeting the students of this university in conjunction with the orientation of the JSPS Summer Program. Students participate in a poster session held in the orientation, and practice the introduction of their research in English, after receiving guidance from English teachers.

SOKENDAI Fund

SOKENDAI Fund has been established to support SOKENDAI Students. For the details, please visit our website https://www.soken.ac.jp/donation/

SOKENDAI Newsletter

SOKENDAI Newsletter covers ongoing activity information at the university such as various events in our campuses, research findings released to media, and awards. You can find it online on our university website. (Japanese text only)
The Center for Educational Development (CED)

"Advanced specialties and expertise", "Broad perspective" and "International competitiveness" are the educational goals of SOKENDAI, and they are the essential competencies for excellent researchers. In order to achieve these goals, we believe that the university-wide education that enhances the quality as an excellent researcher is necessary, in addition to specialized education carried out in each department. The missions of the CED are: to implement and support the university-wide education programs and projects; and, to assist in evaluation and analysis of the educational activities. We contribute to develop researchers rooted in our philosophy.

Implement and provide support for the university-wide education program and projects

- Implement "Freshman Course"
- Provide support in implementing "SOKENDAI Dispatch Program"
- Provide support in developing the international joint/double degree programs
- Provide support in educational activities for students

Provide support for students' activities

- Provide support for students' research activities, job search and networking

Assist in evaluation and analysis of educational activities

- Conduct surveys and analyze the implementation status of the university-wide and specialized education in each department
- Conduct surveys and analyze students' research performance

The Center for Academic Information Services

This Center was established to aims at effective management of academic information in SOKENDAI. Based on secure and resilient information infrastructure, it provides various academic information services to researchers and researchers-in-future who are both users and creators of academic information, and supports education, research and administration in SOKENDAI.

Division of Information Services and Technology

Cooperating with the affiliated research institutes and museums, this division manages core information facilities and operates information systems located at the Hayama Campus and its branch.

SOKENDAI Video Conferencing System

The system connects the affiliated Inter-University Research Institutes and JAXA with the university headquarters. It facilitates teleconferencing and supports university activities.

SOKENDAI Cloud Computing System

This private cloud computing system is a basic facility lately developed to promote intra-university education, academic exchange and public relations.

For inquiries or information: Academic Information Service Office
TEL: 81-46-858-1587  FAX: 81-46-858-1633  E-mail: istc jim@ml.soken.ac.jp
Hayama Library (Attached Headquarters)

Hayama Library gathers, organizes and releases various academic materials to provide high-level research and education and to pioneer advanced academic fields. Hayama Library is open around-the-clock to the faculty and students at the Hayama Campus for reading and borrowing. It collects and makes available standard references and books that can be used in all Departments and Schools, as well as specialized books and journals related to studies in cutting-edge and/or interdisciplinary research fields. Image and video documentation materials are available through in-house facilities.

In addition, Hayama Library offers SOKENDAI Institutional Repository, which allows free online access to doctoral dissertations and book/journal publications at the University, as well as academic papers published by the faculty and students at the Hayama Campus.

### Number of academic materials available at the Library

- **Book**: (Japanese) approx. 23,000 titles
  (Non-Japanese) approx. 24,900 titles
- **Journal**: (Japanese) approx. 200 titles
  (Non-Japanese) approx. 340 titles
- **E-book**: approx. 128,600 titles
- **E-journal**: approx. 5,300 titles
- **Institutional Repository**: approx. 4,900 titles

As of April 1, 2020

For inquiries or information:

**University Library**

TEL: 81-46-858-1528
FAX: 81-46-858-1607
E-mail: lib@ml.soken.ac.jp

---

**University Library**

The University Library consists of the Hayama Library and IURI libraries. The University Library gathers, organizes, and accumulates electronic materials. Under close cooperation with the Hayama Library and IURI libraries, the University Library aims to promote the education / research activities by performing required activities for facilitation of the use of academic information. It offers a large number of e-journals and e-books so that faculty and students of IURIs dotted around the country can use these materials in common. In addition, the university introduces and offers the world’s largest bibliographic / citation database “Scopus”.

---

**Electronic Journals**

BioOne / JSTOR / Science Direct /
Springer-LINK / Wiley-Blackwell / GeoScienceWorld
Scopus (Document/reference database search service)

* In addition to the above, electronic journals for internal use at the Hayama Campus are available.

Nobel Prize Laureates from SOKENDAI

**Professor Emeritus, School of High Energy Accelerator Science**

The 2008 Nobel Prize in Physics for the discovery of the origin of the broken symmetry which predicts the existence of at least three families of quarks in nature

Kobayashi, Makoto

Professor Emeritus, SOKENDAI / Honorary Professor Emeritus, High Energy Accelerator Research Organization (KEK)

*1 The quota of admission is the one in 2000. (The number in parentheses is the quota of 3-year doctoral course. The School of High Energy Accelerator Science does not have a specific quota of admission but accepts only a few students.)

*2 ( ) : The number of those who were granted the Ph.D. by way of Dissertation (not included in the total).

*3 [ ] : The number of those who were granted the Ph.D. within a specified time after leaving the university.

*4 The School of Physical Sciences, the School of High Energy Accelerator Science, and the School of Multidisciplinary Sciences were formed from the former School of Mathematical and Physical Science on March 31, 2004.

## Requirements for completion of the Ph.D. course

Students are required to be enrolled in SOKENDAI for more than 3 years (five-year course students are required to be enrolled for more than 5 years), earn necessary credits prescribed at each department, take necessary research guidance for a doctoral thesis, and pass an examination for a doctoral thesis. Students who are recognized to have achieved great performance, can graduate in shorter term.
The Graduate University for Advanced Studies, SOKENDAI

SOKENDAI renewed our logo as we celebrate the 30th anniversary of the university’s foundation in 2018. SOKENDAI represents a unique educational structure that provides intellectual knowledge at the highest standards. The ethos of the brand is mirrored through the visualization of a line ‘Intelligence Connector’ which symbolizes a platform for the multiple numbers of research centers across the world that form the diverse educational platform of SOKENDAI.

Cover image: Beam pipe with microwave absorbers
For the purpose of low-emittance positron-beam injection to the main ring of the SuperKEKB accelerator, the positron damping ring started its operation in February 2018. Positron beams travel through the center of this photograph of the inside of the beam pipe attached to the RF accelerating cavity used for the positron damping ring. The tile-shaped objects seen in this photograph are microwave absorbers to remove harmful microwave generated by positron beams passing through the inside of the accelerator, achieving stable accelerator operation.
