Message from the President

The Graduate University for Advanced Studies, SOKENDAI is a graduate university with no undergraduate programs that consists of departments housed in affiliated Inter-University Research Institutes and the School of Advanced Sciences attached directly to SOKENDAI. The Inter-University Research Institutes are research centers for joint use by universities throughout Japan in their various research fields. As such, these institutes serve as centers of advanced research in their respective research fields and as nodes of scholarly communication that support international joint research. The School of Advanced Sciences, which is located in Hayama and has no such parent institute, conducts advanced research into the evolution of life and the relationship between science and society.

SOKENDAI was founded in October 1988 on the internationally unprecedented idea of educating graduate students at outstanding centers of research to cultivate future generations of scholars. We are very happy to announce that we were able to successfully cerebrate SOKENDAI’s 30th anniversary, in 2018.

At SOKENDAI, students are educated at Japan’s leading centers of research. Their lives are very different from those of students in graduate programs attached to ordinary undergraduate faculties, especially for students who enroll in our five-year programs straight from their undergraduate studies and pursue their graduate studies and research surrounded by professional researchers and scholars. Faculty outnumber students by more than two-to-one. Students have access not only to equipment and materials unavailable elsewhere but also to a community of top-ranked scholars. While this environment provides amazing opportunities for doctoral dissertation research, it may also be more stressful in some ways than an ordinary university.

This is why every department, with the full support of SOKENDAI, looks after its students and takes steps to ensure that time spent in the department is productive and enjoyable. All our students are encouraged to take full advantage of this distinctive research environment as they pursue their doctoral dissertation research.

“Advanced specialty and expertise”, “broad perspective” and “international competitiveness” have been the educational goals of SOKENDAI since its founding. As mentioned above, students are educated at centers of research, so “advanced specialities and expertise” and “international competitiveness” are perhaps something they naturally learn. But what of a “broad perspective”? A “broad perspective” entails the ability to explain one’s object of research in the broader terms of human intellectual activity in general and to envision new horizons that transcend current disciplinary boundaries. Acquiring these abilities in the course of writing a doctoral dissertation can be hard. Still, I hope students will endeavor to gain this broader perspective at every opportunity by taking full advantage of SOKENDAI’s unique characteristics, including its various departments that collectively encompass a broad range of intellectual fields, from energy, materials, space and life to information, history and culture.

Universities and basic research in Japan today face challenging circumstances. Likewise, there are issues regarding SOKENDAI’s future growth as an institution of higher learning that need our serious attention. Yet, whatever difficult challenges may lie ahead in this uncertain age, we will face them each and every day as first-class researchers and scholars dedicated to working in cooperation with everyone concerned to produce future generations of global professionals.

April 1, 2021

Hasegawa, Mariko, Ph. D.
President
The Graduate University for Advanced Studies, SOKENDAI

Profile
Dr. Hasegawa joined The Graduate University for Advanced Studies, SOKENDAI as a professor in 2006. She went on to serve as a dean of Department of Evolutionary Studies of Biosystems in 2007, as a dean of School of Advanced Sciences in 2011, and then as an executive director in 2014. Dr. Hasegawa became President of SOKENDAI on April 1, 2017.

She earned her Ph.D. degree in Anthropology from Graduate School of Science, University of Tokyo. Before joining SOKENDAI, she worked at the Tanzania Wildlife Service, as an assistant at the Laboratory of Anthropology, Department of Biological Science, Graduate School of Science, University of Tokyo. She also taught as an associate professor and professor at Senshu University, as an associate professor at the Department of Anthropology at Yale University and as a professor at the School of Political Science and Economics, Waseda University.

Her research expertise includes Behavioral Ecology and Physical Anthropology, and she conducted research on wild chimpanzees, fallow deer and wild sheep in Great Britain, peafowl in Sri Lanka. Recently she is conducting research on human evolution and adaptation.

In 2008, she became President of the Human Behavior and Evolution Society of Japan and received the Hidaka Award from the Japan Ethological Society in 2012.
Main features of SOKENDAI

- Interdepartmental education programs
- International research collaborations coordinated by School of Advanced Sciences
- University-wide “Science and Society” education program

- “SOKENDAI Freshman Course”, an intensive course for all first-year students
- Joint education among departments and schools
- Cross-disciplinary education through distance learning systems
- “Joint School Seminars” for interdisciplinary research exchanges among departments

- Education at the hub of international research collaborations
- International Joint Diploma Programs
- SOKENDAI Student Dispatch Program
- Courses focused on academic communication

5 Essential Features

- Creating advanced research fields
- Achieving international competitiveness
- Unique doctoral programs
- Fostering advanced specialties and expertise
- Broadening perspective

- Education programs carried out at cutting-edge research institutes
- Tailor-made education programs
- Flexible education programs for working professionals and foreign students

- Specialized education programs in diverse fields
- Supervision by leading researchers from each field
Purpose of Establishment

In recent years, there has been a strong demand for the promotion of original and international research and the opening up of advanced scientific fields that transcend the boundaries of existing scientific disciplines. The Graduate University for Advanced Studies, SOKENDAI, the first of its kind in Japan, was established to cultivate researchers capable of responding to such demands. It offers the advantage of enabling students to carry out research in the most advanced research environment of Inter-University Research Institutes, which operate under the auspices of the Ministry of Education, Culture, Sports, Science and Technology (MEXT). These institutes conduct advanced research in a variety of fields, and play a central role in the promotion of joint research. SOKENDAI was established to foster creative international researchers with wide-ranging vision who are capable of leading the latest trends in research. The University will promote original and international research and open up new scientific fields that transcend the boundaries of existing scientific disciplines.

Inter-University Research Institutes

Inter-University Research Institutes house large scale, high-technical facilities, high-level laboratories, or various academic data and archives. They are accessible for any university researchers who would collaboratively interact each other, using these facilities. Have you ever heard, either on TV or in a newspaper, of the Subaru telescope, on the Island of Hawaii, or of the observation vessel, SHIRASE, heading to the South Pole? Both of them are related to Inter-University Research Institutes, affiliated with SOKENDAI; the Subaru telescope was established by the National Astronomical Observatory, and the polar observation is carried out by the National Institute of Polar Research. Most of the research activities involve fundamental scientific studies which demand large-scale facilities and a large budget. Inter-University Research Institutes have a great number of researchers and a large amount of research grants are made available to carry out original and advanced scientific research.

Advanced Specialist Education in Research Facilities and General Education Cultivating Broad Views

Ph. D. programs at SOKENDAI provide an ideal education and research environment, offering direct access to large-scale or special experiment/observation facilities, as well as academic materials and data at world-class research institutes in Japan. In our Ph. D. programs, students can be in daily communication with cutting-edge researchers in Japan and abroad as one of the leading international research centers. Having 2-3 faculty members per student, SOKENDAI offers, in a custom-made manner, both advanced specialist education and general education cultivating broad views.

History

June 1982
An informal committee of the directors general of international university research institutes issues an appeal for the introduction of postgraduate courses in the institutes.

April 1986
An informal committee of the directors general of international university research institutes produces a summary of the basic concepts of a postgraduate school for advanced studies based on the results of an investigation by a working group set up to investigate issues related to postgraduate schools. An Office and Committee for the Investigation of the Preparation of the Establishment of a Postgraduate School for Advanced Studies are established at Okazaki National Research Institutes.

March 1987
The Committee for the Investigation of the Preparation of the Establishment of a Postgraduate School for Advanced Studies produces an interim summary on the preparation of the establishment of a tentatively named Graduate University for Advanced Studies.

May 1987
An Office and Committee for Preparation of the Establishment of a Postgraduate School for Advanced Studies are established at Okazaki National Research Institutes.

July 1987
The Committee for Preparation of the Establishment of a Postgraduate School for Advanced Studies produces an interim summary on the preparation of the establishment of a tentatively named Graduate University for Advanced Studies.

April 1988
An Office and Committee for Preparation of the Establishment of the Graduate University for Advanced Studies are established at Okazaki National Research Institutes.

May 1988
The "Law to amend part of the National School Establishment Law" (Law No. 63, 1988), which stipulates the establishment of the Graduate University for Advanced Studies, is announced and enacted.

September 1988
The Committee for Preparation of the Establishment of the Graduate University for Advanced Studies produces a summary of the preparation of the establishment of the Graduate University for Advanced Studies.

October 1988
The Graduate University for Advanced Studies is inaugurated. The central administration office is established at the Tokyo Institute of Technology (Nagatsuda Campus).

March 1989
School of Mathematical and Physical Science
Department of Statistical Science
Department of Accelerator Science
Department of Structural Molecular Science
Department of Functional Molecular Science

(School of Life Science)
Department of Genetics
Department of Molecular Biomechanics
Department of Physiological Science

(THE UNIVERSITY COMMEMORATES MATRICULATION FROM APRIL 1989.) Dr. Saburo Nagatou is appointed as the first President of the University.

April 1989
The School of Cultural and Social Studies is established with the Department of Regional Studies and Department of Comparative Studies.

January 1990
Dr. Ezi Hindo is appointed as the first Vice President of the University.

April 1990
The Coordination Center for Research and Education is established.

April 1992
The Department of Japanese Studies (School of Cultural and Social Studies), and the Departments of Astronomical Science and Fusion Science (School of Mathematical and Physical Science) are established; matriculation begins.

April 1993
The Department of Polar Science (School of Mathematical and Physical Science) is established; matriculation begins.

February 1994
Land in Hayama, Kanagawa (27,000m²), is donated by Mitsui Fudosan Ltd. to allow the construction of the University’s central administration office, as a result of the mediation services of the Kanagawa prefectural government.

March 1994
Construction of the central administration office (4,205m²) begins at the Hayama Campus.

June 1994
The Information Center for Research and Education is established.

February 1995
Administrative functions are transferred from Nagatsuda Campus to Hayama; construction is completed on the central administration building.

April 1995
Dr. Ezi Hindo is appointed as the second President. Dr. Kazuo Moriwaki is appointed as the second Vice President.

April 1997
The School of Advanced Sciences, with the Department of Biotic Systems Science, is established at the Hayama Campus (matriculation begins in April 1999).

April 1998
The Department of Photonscience (School of Advanced Sciences) is established (matriculation begins in April 1999). The Department of Synchrotron Radiation Science changes its name to "The Department of Advanced Science, Particle and Nuclear Physics".

September 1998
Construction of the School of Advanced Sciences building for research (3,060m²) begins at the Hayama Campus.

April 1999
The School of Cultural Studies changes its name to "The School of Cultural and Social Studies".

April 2001
Construction completed on the research building for the School of Advanced Sciences.

Dr. Keichi Kostada is appointed as the third President. Dr. Naoyuki Takahata is appointed as the third Vice President. The Department of Cyber Society and Culture (School of Cultural and Social Studies) is established; matriculation begins.

July 2001
Construction begins on the Hayama Campus Library (1,203m²).

February 2002
Library construction completed.

The Department of Informatics established in the School of Mathematical and Physical Science; matriculation begins.

The Department of Japanese Literature (School of Cultural and Social Studies), and the Department of Space and Astronautical Science (School of Mathematical and Physical Science) are established; matriculation begins.

October 2003
"The National University Corporation Law (No. 112 of 2003)" is promulgated and enforced.

April 2004
Reformation into the National University Corporation, Graduate University for Advanced Studies. Dr. Keichi Kostada is reappointed as the President of the University. The School of Mathematical and Physical Science is reformed into three schools: the School of Physical Science (including the departments of Structural Molecular Science, Functional Molecular Science, Astronomical Science, Fusion Science and Space and Astronautical Science), the School of High-Energy Accelerator Science (including the departments of Accelerator Science, Materials Structure Science, Particle and Nuclear Physics), and the School of Multidisciplinary Science (including the departments of Statistical Science, Polar Science and Informatics). The School of Life Science has reformed a three-year doctoral program into a five-year doctoral program.

April 2005
The name of the Department of Molecular Biomechanics at the School of Physical Science has changed to the Department of Basic Biology.

April 2006
The Department of Molecular Biosciences, the School of High-Energy Accelerator Science, and the School of Multidisciplinary Sciences have implemented the five-year doctoral program system. The Schools have begun to accept students.

April 2007
The School of Advanced Sciences is reorganized to establish the Department of Evolutionary Studies of Biotic Systems (providing a five-year doctoral program), in stead of its two existing departments, the Department of Biotic Systems Science and the Department of Photo Science (providing three-year doctoral programs), matriculation begins.

April 2008
Dr. Naoyuki Takahata has been appointed as the fourth President.

April 2009
The Department of Cyber Society and Culture has stopped accepting new students.

March 2010
Construction of the Center for the Promotion of Integrated Sciences (1,033m²) begins at the Hayama Campus.

April 2010
The name of Hayama Center for Advanced Studies has changed to the Center for the Promotion of Integrated Sciences.

January 2011
Construction of the Center for the Promotion of Integrated Sciences is completed.

April 2013
Information Services and Technology Center is established.

Dr. Yasuo Okada has been appointed as the fifth President.

July 2015
The Center for Academic Information Services is established by unification of the University Library and the Information Services and Technology Center.

March 2017
Department of Cyber Society and Culture abolished.

(Dept. operation period from 2001.4.1 to 2017.3.31)

April 2017
Dr. Makio Hasegawa has been appointed as the sixth President.

March 2018
The Center for Educational Development is established.

April 2018
The Center for the Promotion of Integrated Sciences is abolished.

SOKENDAI Tokyo Branch is established at Tokyo Institute of Technology, Campus Innovation Center (Minato-ku, Tokyo)
## Organization

- **Manager, Financial Affairs Division:** Iizuka, Yasushi
- **Manager, Academic and Students Affairs Division:** Fujimura, Masatoshi
Future Planning Division

In order to support management of the university by the leadership of the President, Future Planning Division was established as the core functions which carries out planning and proposals relating to education/research activities and organizational management of the entire university. We are conducting IR activities and collecting information to support formulating the future vision toward the period for the 4th Mid-term Objectives as the “SOKENDAI Future Vision Project”.

- Planning and proposals relating to management of the University
- IR activities to support planning, proposals and decision making
- International cooperation activities relating to the entire University
- Public relation activities relating to the entire University
- Formulation of the policies relating to management and operations of the headquarters of the University

As of April 1, 2021

The Graduate University for Advanced Studies, SOKENDAI
SOKENDAI has 6 schools and 20 departments. School of Cultural and Social Studies, School of Physical Sciences, School of High Energy Accelerator Sciences, School of Multidisciplinary Sciences and School of Life Science together hold charge of 19 departments, which are housed in 18 affiliated research institutes and operated by 4 Inter-University Research Institute Corporations and Japan Aerospace Exploration Agency. School of Advanced Sciences, which is attached directly to SOKENDAI Headquarters and does not have a parent institute, has one department to conduct research into the evolution of life and the relationship between science and society. In addition, the University Library, The Center for Educational Development and The Center for Academic Information Services have been established as university-wide facilities for all 6 schools.
School of Cultural and Social Studies

By providing comprehensive research and educational programs on the human cultural activities and the relationship among human, society, technology and nature, the School aims to encourage outstanding researchers who can compete internationally and can offer broad perspectives as well as those who can contribute to the society by using advanced research techniques in which they were trained.

School of Cultural and Social Studies

The School of Cultural and Social Studies is the only humanities school at SOKENDAI. The School is comprised of the following five departments affiliated with 4 research institutes: Department of Regional Studies and Department of Comparative Studies affiliated with National Museum of Ethnology, Department of Japanese Studies affiliated with International Research Center for Japanese Studies, Department of Japanese History affiliated with National Museum of Japanese History and Department of Japanese Literature affiliated with National Institute of Japanese Literature. The School not only conducts study and research at each research institute, but also conducts collaborative activities as an entire school. The School is playing an important role of conducting cultural and social studies at SOKENDAI based on a wide variety of academic expertise, and is disseminating the study achievements through methods such as publishing the academic journal “SOKENDAI Review of Cultural and Social Studies”, holding the interdisciplinary exchange program “SOKENDAI Cultural Forum” hosted by each institute in rotation, and implementing the special education program “Academic Resource Management Course”. In addition, the School only accepts students for the second term of a doctoral course (Doctor) while the other schools at SOKENDAI adopt a five-year system.

Departments under the School

- Department of Regional Studies
- Department of Comparative Studies
- Department of Japanese Studies
- Department of Japanese History
- Department of Japanese Literature

Dean

Ito, Takayuki

- Special field
  History of Chinese thought, Cultural interaction in East Asia, Comparative culture
Department of Regional Studies

The Department, affiliated with the National Museum of Ethnology, Japan, offers opportunities to study individual cultures and societies in the regions of Asia, Europe, Africa, the Americas and Oceania. Students are expected to give an ethnographic description of culture and society, analyze their structure, and understand their dynamics while considering the characteristics and history of each region. The Department nurtures researchers who can examine field data, assess the data theoretically, and produce both academic contributions and practical recommendations.

Department of Comparative Studies

The Department, affiliated with the National Museum of Ethnology, Japan, offers opportunities for comparative studies of social systems, religion, technology, languages, art and cultural resources. Students are expected to explore similarities and differences in time and space and to explore new directions in the study of society and culture. The Department has the advantage of access to extensive collections of artifacts, audio-visual records and documentary materials. The Department nurtures researchers who can develop new research areas by combining anthropological methods with the findings of related fields.

Department of Japanese Studies

The Department of Japanese Studies is organized as a single administrative unit in order to facilitate the international and interdisciplinary pursuit of Japanese studies encompassing the humanities, social sciences, and natural sciences. A special feature of our graduate study program is that all the faculty take part in teaching and research guidance. The department requires graduate students to take three courses — “Seminar on Theory and Methodology,” “Interdisciplinary Research,” and “Dissertation Writing Guidance” — which set forth the theoretical and methodological basis for conducting Japanese studies from a global perspective. Through these courses and research guidance, we aim to nurture researchers with a creative and highly specialized perspective, broad interdisciplinarity, and the ability to integrate across multiple fields of study.
**Department of Japanese History**

In the Department of Japanese History, which has the National Museum of Japanese History as its parent institute, researchers specializing in history, archaeology, folklore and allied disciplines including natural science, provide educational and research opportunities, including fieldwork, from interdisciplinary viewpoints. The most distinctive feature of the Department is that the students can use materials that are stored in the Museum, as well as various tangible and intangible information resources and advanced equipment for scientific analysis. The Department aims to foster researchers who are highly capable of comprehensive material-based analysis of Japanese history and culture and individuals who contribute to society with their broad and international perspectives.

**COURSES**

- **Japanese History**
  - Studies of Historical Materials / Studies of Source Materials and Research on Exhibits / Analytical and Information Sciences /
  - Social History / Technological and Environmental History / Regional Cultures / International Exchange /
  - Intensive Lectures A·B·C·D /
  - Basic Seminar I·II /
  - Instruction for Doctoral Dissertation Making I·II

---

**Department of Japanese Literature**

The pillars of education in the Department of Japanese Literature are to attain deep expertise on Japanese literature and related fields as well as investigative techniques and comprehensive analytical skills for related materials, while utilizing the cultural resources of the National Institute of Japanese Literature, a fundamental organization and pioneering inter-university research institute that compiles and researches vast amounts of academic information based on investigation of original materials. We offer courses from a systematic curriculum with a focus on Japanese literature and an eye to a wide range of fields while also providing research guidance under multiple faculty members in order to develop researchers with advanced expertise and human resources who can contribute to society through their research results.

School of Physical Sciences

Aiming to nurture world-class researchers with broad perspectives as well as individuals with advanced knowledge and skills who will contribute to society in the field of material-, space- and energy-related physics and chemistry.

The School of Physical Sciences conducts education and research in physical sciences relating to material, space, energy and life. The five departments that constitute the School have been located at four Inter-University Research Institutes: the Institute for Molecular Science, the National Astronomical Observatory of Japan, the National Institute for Fusion Science and Institute of Space and Astronautical Science. These Institutes house special and large equipment impossible for general universities to accommodate, and they have implemented a great number of large-scale and internationally advanced research projects. The School is open to many foreign researchers, including visiting faculty members, postdoctoral fellows and students, and thus offers a highly international environment. In this excellent research environment, students experience the frontiers of physical science and devote themselves to study and research, striving to create the science of the future by themselves. The School provides a tutoring system in which at least two faculty members are assigned per student, allowing practical research with one-on-one guidance. In addition, a research assistant (RA) system has generously supported students financially and created an environment in which they can concentrate on their study and research. We hope that many motivated students will enroll in the School and grow into researchers who will play major roles in the future of physical science.

Departments under the School
- Department of Structural Molecular Science
- Department of Functional Molecular Science
- Department of Astronomical Science
- Department of Fusion Science
- Department of Space and Astronautical Science

Dean
Namiki, Noriyuki

Special field
Planetary Science
Department of Structural Molecular Science

Education and research are primarily concerned with a systematic unveiling of the static as well as dynamic properties of materials through real images of molecules and molecular assemblies deduced from detailed structural analyses. Advanced training and research are conducted in the field of structural molecular science with the use of new methods for detecting and analyzing dynamic structures, in addition to a variety of traditional spectroscopic and theoretical techniques for structural analysis.

Electronic states studied by photoelectron spectroscopy

Department of Functional Molecular Science

Education and research are primarily directed towards, firstly, unveiling the underlying mechanisms of various functions of materials at the atomic or molecular level, and secondly, the design and generation of new functional properties of molecules and molecular assemblies. Advanced training and research are conducted in the field of functional molecular science with an emphasis on the development of modern techniques for functional analysis and novel theoretical approaches.

Purification of proteins by high-performance liquid chromatography

Department of Astronomical Science

The department carries out advanced education and research through a wide range of observational and theoretical researches using state-of-the-art facilities like Subaru Telescope in Hawai’i, the ALMA radio telescope in Chile, and supercomputers. According to the interest, students can learn the observational and theoretical astronomies and application of cutting-edge technology as well as the design, fabrication and testing of new observational instruments, development of new methods of data acquisition and analysis, and public outreach.

Subaru Telescope is located on the summit of Mauna Kea, a dormant volcano on the Big Island of Hawai’i.
Department of Fusion Science

To develop fusion power for a future energy source, it is necessary to research plasma physics through a complementary approach of both experimental and theoretical studies. In this department, students learn the experimental methodology as well as engineering requirements for investigating high temperature plasma, and also learn computer simulation techniques for revealing the nature of complicated fusion plasmas.

LHD Vacuum Vessel

Microscopic instability simulation in core plasma of Large Helical Device by gyrokinetic particle code

Department of Space and Astronautical Science

The Department of Space and Astronautical Science provides an opportunity for high-level education and advanced research through theoretical studies, analysis of acquired data, and practice of advanced R&D in Astrophysics, Solar System Sciences and Space Engineering. The main feature of each major is as follows.

- **Astrophysics** is to elucidate the origin, structure and evolution of the universe based on the observations from space.
- **Solar System Sciences** is to understand the origin and evolution of a variety of environments, including the prebiotic materials, by examining the present status and samples of past days.
- **Space Engineering** is to lead the future space development by providing innovative space technology. New space technology enables challenging missions in the above two scientific activities.

In addition, it is expected to cultivate not only depth of knowledge in Space Science but also the planning skills for space projects by touching on the most advanced and complex space projects.

School of High Energy Accelerator Science

The School of High Energy Accelerator Science provides opportunities for graduate students to carry out experimental and theoretical research on elementary particles and on materials structure and functions. The School also encourages them to engage in the research and development of novel and high performance accelerators. In addition, the School aims to foster the creative researchers who will push the frontiers of science and contribute to the good of society.

School of High Energy Accelerator Science

The School of High Energy Accelerator Science consists of three departments: the Department of Accelerator Science, the Department of Materials Structure Science, and the Department of Particle and Nuclear Physics. These departments are affiliated with the Accelerator Laboratory (and the Applied Research Laboratory), the Institute of Materials Structure Science, and the Institute of Particle and Nuclear Studies in the High Energy Accelerator Research Organization (KEK).

In the Department of Particle and Nuclear Physics, accelerator based high energy physics experiments through international collaborative projects as well as advanced theoretical research are performed in order to study and understand the origin of the cosmos and the ultimate structure of matter. In the Department of Materials Structure Science, structures of hard to soft materials and their functions are studied not only from a fundamental interest but also from an application point of view. KEK develops and operates high-energy accelerators which provide various particle beams such as protons, electrons, positrons, neutrinos, X-rays, neutrons and muons. In the Department of Accelerator Science, principles and components of the accelerator complexes are studied. The education programs are based on variety of research activities pursued by KEK, which provide wide range of graduate education for students.

Departments under the School

- Department of Accelerator Science
- Department of Materials Structure Science
- Department of Particle and Nuclear Physics

Dean
Iso, Satoshi

Special field
Particle Physics, Theoretical Physics
Department of Accelerator Science

High-energy particle accelerators are extremely powerful tools for exploring a wide range of building blocks and structures found in nature, from elementary particles and atomic nuclei to atoms, molecules and even complex living organisms. In addition, beyond the field of natural science, applications of particle accelerators are being actively pursued in the fields of industry and medical science. In the Department of Accelerator Science, students can conduct both theoretical and experimental research on the principles of accelerators and their related leading edge technologies, and thereby endeavor to further advance natural science through the development of particle accelerators. Closely related subjects, such as radiation science, computer science, superconductivity engineering, and mechanical engineering can also be studied.

Department of Materials Structure Science

In Department of Materials Structure Science, leading edge researches on structures, functions and characteristics of hard to soft materials are pursued. The research studies concerning physics, chemistry, biology, engineering, agriculture and medical science are performed by the use of advanced beams such as synchrotron radiation, neutrons, muons and slow positron, which are provided by state-of-the-art particle accelerators. Developing novel technologies for beam production and its utilization to make major contributions to materials science are also included in our research fields. We will offer education programs and experimental opportunities to our students who will aim for clarifying the Nano World.

Department of Particle and Nuclear Physics

Both particle physics and nuclear physics are among the most fundamental areas of basic science, and they are the sources of new frontiers in physical concepts and methods that are the basis of modern science; these subjects involve the pursuit of the most fundamental principles of nature and the exploration of the basic structure and building blocks of matter.

In this department, we conduct both theoretical and experimental researches in particle and nuclear physics. The theoretical investigations include not only those in particle and nuclear physics but also those in cosmology and astrophysics. The experimental investigations are conducted by means of colliding beam accelerators and various beams from high-intensity proton accelerators. In addition, related research in physics, including the R&D of new devices, methods and their applications, is pursued in a versatile manner.

For inquires or information:

School of Multidisciplinary Sciences

The School of Multidisciplinary Sciences conducts research and education on complicated natural and social phenomena, as systems that govern the occurrences, functions, and interactions of these phenomena, from the comprehensive and transdisciplinary viewpoint. Through such research and educational activities, the School aims to nurture researchers and highly specialized professionals in the area of information and systems who will take the lead in academic research and address various important issues relating to changes in human society in the 21st Century. The School, consisting of the Department of Statistical Science, the Department of Polar Science, and the Department of Informatics, has been involved in multidisciplinary research fields from the beginning. In addition, the School further strives to enhance its research and education by promoting close collaboration between the Departments by, for example, setting common subjects in curricula. The School covers diverse research subjects but studies the principles of multidisciplinary science, research approaches, and methodologies as an essential part of the School’s research and education activities. The Department of Statistical Science and the Department of Informatics seek to determine the common probability or complexity among various phenomena by statistical mathematics and data analysis. The Department of Polar Science studies the geophysical and the biological complex system in the polar regions of extremes on Earth and approaches its subject from the viewpoint of multidisciplinary science. By continuing to explore new research fields, including advanced and leading research fields, and systematizing them through such activities, the School strives for further development of the multidisciplinary sciences.

Departments under the School

- Department of Statistical Science
- Department of Polar Science
- Department of Informatics

Dean

Miyasato, Yoshihiko

Special field

Control Theory
Department of Statistical Science

The Department of Statistical Science is operated by the Institute of Statistical Mathematics, which has made great achievements in statistical science, including the Akaike information criterion, and has been contributing to the development of science as a central research institute of statistical science not only in Japan but also in the world.

This department conducts education and research on theory and applications to extract information and knowledge from the real world based on data, and aims to develop human resources with creative research capabilities solving various important issues that are completely intertwined.

Department of Polar Science

Nature in polar regions is conditioned by the interactions between space, the upper atmosphere, the hydrosphere, the geosphere and the biosphere, with the whole Earth constituting a massive natural system. Polar science serves as a foundation for a broad range of fields connected with this natural system, with the purpose of elucidating various physical, chemical and biological processes of the system, as well as their mutual interactions, from a perspective that sees the Earth as a seamless system. The Department of Polar Science conducts education and research focused on natural phenomena occurring in the regions of the North and South Poles, embracing a view of the Earth as a global-scale environment. We strive to cultivate outstanding researchers equipped with advanced research and the ability to work as field scientists who are creative and flexible in studying the past, current and future figure of the Earth.

Department of Informatics

Achieving Excellence in Informatics

Informatics is a scientific research field that extensively and synthetically deals with problems related with information from various aspects. It is a multidisciplinary science covering not only traditional information science and engineering but also modeling, artificial intelligence and data science, which are indispensable in the recent data-driven society, and even humanity informatics and social informatics. It includes visualization, acquisition/collection, circulation, management, processing, understanding, and usage of information as well as the information technology to support them. The department of Informatics aims to foster researchers and highly skilled professionals with ability in a broad range from foundations to practices and advanced specialty by utilizing cutting-edge research environments and cyber science infrastructure of the National Institute of Informatics where you can enjoy an international atmosphere with many active researchers and students from various countries.
School of Life Science

The School of Life Science aims to cultivate researchers who are internationally competitive and possess broad perspectives necessary for taking on leading roles in the life science research of the next generation. Students participate in research to clarify life phenomena at various levels from the molecular to the individual to the population.

School of Life Science

The School of Life Science aims to educate researchers who are internationally extraordinary and possess creativeness and broad perspectives to explore new fields of Life Science. Professors in this school cover wide fields of Life Science from the molecular to organismal and population levels.

The School of Life Science offers graduate programs that are aimed at nurturing independent and creative researchers that expand the frontiers of life science. Three departments that constitute the School of Life Science are based on three leading research institutions — National Institute of Genetics, National Institute for Basic Biology, and National Institute for Physiological Sciences. Research activities of these institutes cover variable fields of Life Science and the School of Life Science aims to provide research environments in which students can learn interdisciplinary concepts as well as their own specialty. Housing the largest number of life science faculty in Japan, the School of Life Science offers a mentoring system by multiple faculty, and provides a superb environment for independent research by each student. The graduate course provides not only lectures by outstanding internal professors but also seminars on the latest research progress conducted by external researchers, educational programs for cross-disciplinary approaches, and courses on scientific writing and presentation. The three departments hold a joint retreat every year for scientific interactions and share lectures over the internet for further enhanced interactions. We welcome students who love and enjoy Life Science, and dream to open new windows into the field.

Departments under the School

• Department of Genetics
• Department of Basic Biology
• Department of Physiological Sciences

Dean
Fujimori, Toshihiko

Special field
Developmental Biology
Department of Genetics

The Department of Genetics offers education and research opportunities in a variety of cutting-edge disciplines with the goal of investigating biological phenomena on the basis of genetic information. Study and research fields include molecular, cellular, developmental, behavioral, population, and evolutionary genetics, as well as genome biology and bioinformatics. Students can take advantage of a wide range of databases and genetic resources hosted by the National Institute of Genetics. To nurture independent researchers, the Department of Genetics adopts an educational philosophy that the academic guidance of each individual student is carried out by the entire faculty. For example, graduate students meet with their thesis committee twice a year to receive advice from faculty members outside their host labs. Other features of the Department include the Scientific Presentation/ Writing Program and ample financial assistance opportunities such as our research assistant program.

The rich environment of the Department of Genetics allows students to fully devote themselves to their own research projects. Lively discussions are often held in the laboratories.

COURSES
- Molecular and Cellular Biology
- Developmental Biology
- Evolutionary Biology
- Genome Biology

For inquiries or information:
E-mail: info-soken@nig.ac.jp

Department of Basic Biology

The Department of Basic Biology trains researchers capable of developing innovative approaches and creative ideas to understand higher order phenomena in biological science. Students take advantage of the environment and facilities of the National Institute for Basic Biology. Students conduct a PhD research project with taking a variety of advanced classes and advices from several professors with different specialities. Research fields in this department cover cell biology, developmental biology, environmental biology, neurobiology, symbiotic biology and evolutionary biology with appropriate model organisms and top-end techniques including molecular biology, bioimaging, mathematical science and omics.

Department of Physiological Sciences

Physiology is to clarify the mechanisms of living bodies from both elements (cells and molecules) and systems, and therefore provides important basic knowledge necessary for understanding pathological conditions. Importance of physiology has been much increased upon clarification of genome structures. In this department, students can learn the function of intact organisms in an integrated way from molecular / cellular levels as basic units of living organisms to whole body levels, and are expected to be pioneering researchers in bioscience, neuroscience and medicine.

Cells, tissues and organs which researchers in Department of Physiological Sciences are working on using different experimental procedures

Based on SOKENDAI’s founding principles and purposes, the School aims to accomplish world-class academic research beyond the borders of conventional academic fields through interdisciplinary approaches. Additionally, we strive to develop transdisciplinary and advanced academic fields and to produce researchers who have broad perspectives and a high level of expertise that is globally competitive.

School of Advanced Sciences

The School of Advanced Sciences is a school with just one department: the Department of Evolutionary Studies of Biosystems. Our mission is to perform research and education in the fields of evolution and science and society. The evolution section focuses on the diversity and evolutionary history of organisms, and consists of four subsections: integrative anthropology, behavioral biology, evolutionary biology and theoretical biology. The science and society section studies the roles and responsibilities of scientists within society, from the viewpoint that science is a social activity of humans. Students carry out Ph.D. research in their own field, but are also required to write a subthesis in the other one: biology students write a subthesis on science and society, and vice versa. The barriers between laboratories have been removed as far as possible, which makes for an intense, intimate educational environment for all students and faculty. We thus hope that all of our students will become competent and well-balanced researchers / professionals. We also actively promote international and domestic collaborations with other universities and research institutes, to plant the seeds for fruitful future research fields.

Departments under the School

- Department of Evolutionary Studies of Biosystems

Dean
Kutsukake Nobuyuki

Special field
Animal Behavior
Vision for future through novel perspectives on life

Studying biological organisms, humans and society from broad perspectives, our department is designed to develop deeper understanding on nature through evolutionary studies of biosystems and meta-consideration of science. Our education and research program focus on the biological phenomena with evolutionary perspectives and the relationship between science, technology, and the society. We thus aim to train independent researchers who can contribute for building sustainable society with their expertise and broad perspectives.

Educational Programs

SOKENDAI Freshman Course

The Freshman Course is an intensive course for newly-enrolled students of SOKENDAI. It is a unique program that intends to provide our new students with fundamental knowledge and skills for a researcher; and, is also an opportunity to learn about the breadth of academia through interactions with peer students and researchers coming from different fields. In the past, the Freshman Course was held for four-days long at our Hayama campus; however, amid COVID-19, since 2020, the course is offered online. It consists of three sessions: “Exploring Diversity in Academia (EDA),”, “Researchers and Society,” and “Communication Skills for Researchers.”.

Course Groups

A course group is a cluster of courses categorized across a wide spectrum of specific areas that are intimately related to each other. In some course groups, a coalition of schools/departments bring along their own courses to build up the group; students can enjoy special subjects of an adjacent academic discipline to broaden their perspective, quickly grasp a general idea of each discipline and/or get an objective overview of various disciplines.

When a SOKENDAI student travels to the other campus, for the purpose of receiving a lecture, part of the expenses (ex. transportation expenses) may be reimbursed after course.

2021 Course Groups

**Integrative Brain Science Course**

Brain science requires a wide range of knowledge and view not only on physiology, but also on biology, technology, pharmacology, information science and social science. This course will provide lectures and practices for the purpose of integrating multidisciplinary approaches and developing a new research field. All the lectures will be broadcasted through our remote lecture delivery system except training course.

**Integrative Bioscience Education Course**

To foster the development of young researchers who can contribute to the future of biology in connection with the recent developments of various technologies, we provide a new course that promotes interdisciplinary and integrative views of biological processes, covering not only biological but also physical, mathematical, and information sciences. All the lectures will be provided through the remote lecture delivery system except training course.

**Courses common to the School of Physical Sciences and the School of High Energy Accelerator Science**

Utilizing research topics and themes common to both schools and their departments, the schools provide the courses mainly to students with academic background or fundamentals in Physical Sciences. The courses aim to help students cultivate the basic skills, interdisciplinary and integrated perspectives on nature essential for researchers.
School of Advanced Sciences has been leading a program to develop graduate education in “science and society”. Since the university’s primary mission is to train professionals who have leading expertise as well as broader perspectives, we hope our young scientists develop abilities to grasp science as part of social activities and to think critically about social dimensions of scientific practice including social implications and impacts of research activities and infrastructure supporting scientific research. Therefore the program designs and provides courses on “science and society”. As part of the activities, we offer a 1.5-day program, “Researchers and Society”, within the Freshman Course twice a year (in Japanese and English).

**“Science and Society” Program**

The historical and cultural resource management course is led by the School of Cultural and Social Studies and aims to develop researchers with a high capability in historical and cultural resource management through learning about advanced historical and cultural resource management such as methods for reading diverse historical and cultural resources, analysis using advanced scientific methods, recording and scientific preservation management of historical and cultural resource information, and research presentations using historical and cultural resources.

**Historical and Cultural Resource Management Education Program**

The Program is provided jointly by the School of Physical Sciences and the School of High Energy Accelerator Science. It seeks to foster researchers in the field of physical sciences who are fully equipped with a high degree of professional qualities as well as broad perspective and international competence to meet the needs of society. In the 1st to 2nd years of the 5-year doctoral course, the Program focuses on building basic academic skills at the graduate school level. In the 3rd to 5th years of the 5-year doctoral course students are placed according to their aptitude into one of the following four courses: Basic Course*, Advanced Research Course, Project Research Course (available only in the School of Physical Sciences), and Development Research Course (available only in the School of Physical Sciences).

*For students matriculating in AY2018 or later, course completion in the “Basic Course” has been discontinued.
Joint School Seminars

SOKENDAI Cultural Forum / School of Cultural and Social Studies

December 5-6, 2020 at International Research Center for Japanese Studies

The forum is an event for academic exchanges organized by SOKENDAI’s only liberal arts department, School of Cultural and Social Studies. Centering “culture” as a common focus, it offers a forum for interdisciplinary exchanges among faculties and students of various departments from inside and outside of the university. As it provides a place to publish their research, the event functions as an educational opportunity for the students to present their research works and achievements and to learn presentation skills at the same time. Through these activities, the project also serves as a gateway for academic interactions between art and science students. Furthermore, by involving students in the planning and organization of the event, students can exercise their planning skills and receive advices and supports from faculties on project management through the collaboration, which in turn would facilitate students’ ability as independent researchers.

Physical Science Student Seminar / School of Physical Sciences and School of High Energy Accelerator Science

July 12-13, 2018 at Nobeyama Radio Observatory

School of Physical Sciences and School of High Energy Accelerator Sciences organize the multidisciplinary Physical Science Student Seminar as a part of their course curriculums. Every two years, students and faculties from eight departments join in this overnight event to hold academic seminars. The project authorizes students to take responsible roles in the planning and organization of the event in order to polish their planning and organizing skills and train them as highly competent researchers.

※The program was not implemented due to the COVID-19 in 2020.

Multidisciplinary Sciences Cross Talks / School of Multidisciplinary Sciences and School of Life Science (Department of Genetics)

December 16, 2020 and January 27, 2021 Online

At the “Young Researchers Cross Talks” hosted by Research Organization of Information and Systems and co-sponsored by School of Multidisciplinary Sciences, members of School of Multidisciplinary Sciences and Department of Genetics, as well as faculties and students from a variety of fields in SOKENDAI, join together to hold group discussions throughout this overnight event. Through group discussions and presentations on multidisciplinary topics with the presence of local and international faculties and students from various fields of study, students are expected to acquire higher expertise, wider perspectives, and international competency.
Life Science Retreat / School of Life Science & School of Advanced Sciences

December 22-23, 2020 Online

Life Science Retreat invites biology faculties and students for academic interactions, through which it aims to foster talents with a broader grasp of biological science and the capacity to contribute to the development of the field. English is used throughout the conference to improve the participants’ international caliber. Students plan and coordinate research presentations (oral and poster) and opinion exchanges. In the project, student organizers are expected to polish planning skills through the preparation and exercise presentations skills.

In 2020, this seminar was held online for the first time and was attended by about 110 students and faculty members.

SOKENDAI Student Dispatch Program

This program encourages SOKENDAI students to seek a short-term research opportunity abroad and/or a long-term collaborative research project in and outside Japan that may lead to their career in the future. The program follows the educational goals of SOKENDAI, “advanced specialties and expertise”, “broad perspective”, and “international competitiveness”, and intends to financially support such research opportunities of SOKENDAI students.

2020

Category 3 (Long-term Domestic Program)

Number of students supported: 1

※The program was not implemented due to the COVID-19 in 2020.

SOKENDAI publication grant for research papers

The publishing cost support of the printing expenses is carried out for about the academic paper which was a result of the research activities. This support is applicable only for the students who belong to SOKENDAI. Total 23 publications were supported in 2020.
Society and Community Outreach Activities

Community Programs

We communicate the outcomes of the University’s educational and research activities and give back to the community, with the aim to promote and spread the arts and sciences, as well as promote excellent research findings.

Ueno, Kazuki (Assistant professor, Department of Particle and Nuclear Physics)

"Yokoko Academia" with Kanagawa Prefectural Yokosuka High School
We supported the academic program, "Yokoko Academia" organized by Kanagawa Prefectural Yokosuka High School to contribute to local educational institutes and foster future generations.

The school is designated as a Super Science High School by the Ministry of Education, Culture, Sports, Science and Technology.

Community Programs

From various on-going studies, the School selects themes relating to “life and evolution” and organizes academic lectures that deliver findings from cutting edge research to the general public and help to create deeper communication with people in the local communities.

Press Release

Research findings in 2020 published on the following papers are press released and subsequently appeared in newspapers and various media:

- TAMA300 Blazes Trail for Improved Gravitational Wave Astronomy
- Whole Genome Duplication Drove the Evolution of Carnivorous Plants
- Automated crystal structure analysis based on blackbox optimisation
- The First Results from the KaVA Large Program for Star-formation Studies: Unveiling massive baby stars ejecting complex high velocity outflows
- Loss of symbiont infectivity following thermal stress can be a factor limiting recovery from bleaching in cnidarians
- Abrupt Holocene ice-sheet thinning along the southern Soya Coast, Lützow-Holm Bay, East Antarctica, revealed by glacial geomorphology and surface exposure dating
- Identification of ancient viruses from metagenomic data of the Jomon people
- Evolutionary History of the Risk of SNPs for Diffuse-Type Gastric Cancer in the Japanese Population
- In vitro resynthesis of lichenization reveals the genetic background of symbiosis-specific fungal-algal interaction in Usnea hakonensis.
- Symmetry prediction and knowledge discovery from X-ray diffraction patterns using an interpretable machine learning approach
- Communal roosting shows dynamics predicted by direct and indirect nepotism in chestnut-crowned babblers
- Fecal proteomics as a novel method to study mammalian behavior and physiology

JSPS Summer Program

This program, which is carried in partnership with Japan Society for the Promotion of Science (JSPS), offers opportunities to practice research at inter-university research institutes (IURIs) or universities to young researchers who have undertaken or just completed doctoral programs for two months during the summer.

※The program was not implemented due to the COVID-19 in 2020.

SOKENDAI Fund

SOKENDAI Fund has been established to support SOKENDAI Students. For the details, please visit our website.
https://www.soken.ac.jp/donation/

SOKENDAI Newsletter

SOKENDAI Newsletter covers ongoing activity information at the university such as various events in our campuses, research findings released to media, and awards.
You can find it online on our university website. (Japanese text only)
The Center for Educational Development (CED)

“Advanced specialties and expertise”, “Broad perspective” and “International competitiveness” are the educational goals of SOKENDAI, and they are the essential competencies for excellent researchers. In order to achieve these goals, we believe that the university-wide education that enhances the quality as an excellent researcher is necessary, in addition to specialized education carried out in each department. The missions of the CED are: to implement and support the university-wide education programs and projects; and, to assist in evaluation and analysis of the educational activities. We contribute to develop researchers rooted in our philosophy.

Implement and provide support for the university-wide education programs and projects

- Implement "Freshman Course"
- Provide support in implement "SOKENDAI Dispatch Program"
- Provide support in developing the international joint/double degree programs

Meet our students' needs and provide students with support for their learning and activities

- Provide students with support for their learning, research activities, job search and networking

Assist in evaluation and analysis of educational activities

- Conduct surveys and analyze the implementation status of the university-wide and specialized education in each department
- Conduct surveys and analyze students' research performance and experience

The Center for Academic Information Services

This Center was established to aims at effective management of academic information in SOKENDAI. Based on secure and resilient information infrastructure, it provides various academic information services to researchers and researchers-in-future who are both users and creators of academic information, and supports education, research and administration in SOKENDAI.

Division of Information Services and Technology

Cooperating with the affiliated research institutes and museums, this division manages core information facilities and operates information systems located at the Hayama Campus and its branch.

SOKENDAI Video Conferencing System

The system connects the affiliated Inter-University Research Institutes and JAXA with the university headquarters. It facilitates teleconferencing and supports university activities.

SOKENDAI Cloud Computing System

This private cloud computing system is a basic facility lately developed to promote intra-university education, academic exchange and public relations.

For inquiries or information: Academic Information Service Office
TEL: 81-46-858-1587 FAX: 81-46-858-1633 E-mail: istc.jimu@ml.soken.ac.jp
Hayama Library (Attached Headquarters)

Hayama Library gathers, organizes and releases various academic materials to provide high-level research and education and to pioneer advanced academic fields. Hayama Library is open around-the-clock to the faculty and students at the Hayama Campus for reading and borrowing. It collects and makes available standard references and books that can be used in all Departments and Schools, as well as specialized books and journals related to studies in cutting-edge and/or interdisciplinary research fields. Image and video documentation materials are available through in-house facilities.

In addition, Hayama Library offers SOKENDAI Institutional Repository, which allows free online access to doctoral dissertations and book/journal publications at the University, as well as academic papers published by the faculty and students at the Hayama Campus.

Number of academic materials available at the Library

- Book: (Japanese) approx. 23,000 titles
  (Non-Japanese) approx. 24,900 titles
- Journal: (Japanese) approx. 200 titles
  (Non-Japanese) approx. 340 titles
- E-book: approx. 137,430 titles
- E-journal: approx. 5,480 titles
- Institutional Repository: approx. 5,000 titles

As of April 1, 2021

For inquiries or information:
University Library
TEL: 81-46-858-1528
FAX: 81-46-858-1607
E-mail: lib@ml.soken.ac.jp

The Library also provides database services, including OPAC (Online Public Access Catalog) for books and journals held by the Library. These books and database are also available to general public. The venue effectively functions both as a place to collect research resources and a studying space. SOKENDAI staffs and neighborhood residents can borrow books belonging to Kanagawa Prefectural Library (KL-NET Service). Furthermore, since 2015, it has been serving as a service counter of National Diet Library to enable users to browse digital materials belonging to the National Diet Library.

For inquiries or information:
University Library
TEL: 81-46-858-1528
FAX: 81-46-858-1607
E-mail: lib@ml.soken.ac.jp

University Library

The University Library consists of the Hayama Library and IURI libraries. The University Library gathers, organizes, and accumulates electronic materials. Under close cooperation with the Hayama Library and IURI libraries, the University Library aims to promote the education/research activities by performing required activities for facilitation of the use of academic information. It offers a large number of e-journals and e-books so that faculty and students of IURIs dotted around the country can use these materials in common. In addition, the university introduces and offers the world's largest bibliographic/citation database “Scopus”.

Electronic Journals

BioOne / JSTOR / Science Direct / Springer-LINK / Wiley-Blackwell / GeoScienceWorld
Scopus (Document/reference database search service)
※ In addition to the above, electronic journals for internal use at the Hayama Campus are available.

Kobayashi, Makoto
Professor Emeritus, School of High Energy Accelerator Science

The 2008 Nobel Prize in Physics for the discovery of the origin of the broken symmetry which predicts the existence of at least three families of quarks in nature

1999.4-2004.3 Professor, School of Mathematical and Physical Science
2004.4-2006.3 Professor, School of High Energy Accelerator Science
2003.4-2004.4 Chair, Department of Particle and Nuclear Physics
2008 Order of Culture

Ohsumi, Yoshinori
Professor Emeritus, School of Life Science

The 2016 Nobel Prize in Physiology or Medicine for his discoveries of mechanisms for autophagy

1996.10-2009.3 Professor, School of Life Science
2008.4-2009.3 Dean, School of Life Science
2006 Japan Academy Prize
2016 Order of Culture
Recipients of Award

Orders and Medals of Honor (after 2013)

※1 The quota of admission is the one in 2021. (The number in parentheses is the quota of 3-year doctoral course. The School of High Energy Accelerator Science does not have a specific quota of admission but accepts only a few students.)
※2 ( ) : The number of those who were granted the Ph.D. by way of Dissertation (not included in the total).
※3 [ ] : The number of those who were granted the Ph.D. within a specified time after leaving the university.
※4 The School of Physical Sciences, the School of High Energy Accelerator Science, and the School of Multidisciplinary Sciences were formed from the former School of Mathematical and Physical Science on March 31, 2004.

Requirements for completion of the Ph.D. course

Students are required to be enrolled in SOKENDAI for more than 3 years (five-year course students are required to be enrolled for more than 5 years), earn necessary credits prescribed at each department, take necessary research guidance for a doctoral thesis, and pass an examination for a doctoral thesis. Students who are recognized to have achieved great performance, can graduate in shorter term.

The Graduate University for Advanced Studies, SOKENDAI

School of Physical Sciences
School of High Energy Accelerator Science
School of Multidisciplinary Sciences
School of Life Science
School of Advanced Science
School of Cultural and Social Studies

5-year Doctoral Course

- 5th year
- 4th year
- 3rd year
- 2nd year
- 1st year

3-year Doctoral Course

- 3rd year
- 2nd year
- 1st year

Master’s course
2 years
2 years or more experience in research

Undergraduate course 4 years
### Career Tracking / Data of the 2020

#### Total

- **Undetermined**: 45 People (45.44%)
- **Research positions**: 40 People (40.40%)
- **Specialists/Technicians**: 11 People (11.11%)
- **Others**: 5 People (5.5%)

#### Type of Occupation

- **Universities/Research institutes, etc**
  - High Energy Accelerator Research Organization (KEK)
  - National Institute of Informatics
  - Institute for Molecular Science
  - The University of Tokyo
  - National Institute for Basic Biology
  - National Institute of Advanced Industrial Science and Technology (AIST)
  - National Center for Physics, Islamabad, Pakistan
  - Kyushu University
  - The Graduate University for Advanced Studies, SOKENDAI
  - Okayama University
  - Civil Engineering Research Institute for Cold Region
  - National Institute of Polar Research
  - National Institute for Nuclear Physics
  - National Astronomical Observatory of Japan
  - Astrobiology Center, National Institutes of Natural Science
  - Kyoto University
  - Japan Society for the Promotion of Science
  - National Institute for Physiological Sciences
  - Nagoya University
  - National Institutes for Quantum and Radiological Science and Technology

- **Private companies/Public service corporation**
  - Tecnos Data Science Engineering
  - THE NIKKAN KOGYO SHIMBUN, LTD.
  - JEOL Ltd.
  - Rakuten Group, Inc.
  - Toshiba Corporation
  - Panasonic Corporation
  - Interstellar Technologies Inc.
  - FujiClean CO., LTD.
  - Genesis Healthcare Co.
  - Mitsubishi Research Institute, Inc.
  - Nintendo Co., Ltd.
  - Otsuka Pharmaceutical Co., Ltd.
  - Canon Medical Systems Asia Pte Ltd
  - NIPPON STEEL CORPORATION
  - Reillics Inc.
  - Sagami Chemical Research Institute
  - Central Research Institute of Electric Power Industry

#### Breakdown of the total

- The number of those who completed a course and obtained a degree: 76
- The number of those who left the university after obtaining the credits required for completion of a course in the relevant academic year: 23

#### Undetermined People: 45 (45.44%)

- **Others**: 5 People (5.5%)
- **Specialists/Technicians**: 11 People (11.11%)
- **Research positions**: 40 People (40.40%)

**42** The Graduate University for Advanced Studies, SOKENDAI
SOKENDAI renewed our logo as we celebrate the 30th anniversary of the university's foundation in 2018. SOKENDAI represents a unique educational structure that provides intellectual knowledge at the highest standards. The ethos of the brand is mirrored through the visualization of a line 'Intelligence Connector' which symbolizes a platform for the multiple numbers of research centers across the world that form the diverse educational platform of SOKENDAI.

The photograph shows a longitudinal optical section of germinating rice seed. There is a shoot enclosed by elongating coleoptile. Shoot apical meristem, a population of stem cells of above ground part of plants, is seen at the center of the shoot. In the rice embryo, radicle (embryonic root) appears inside of the embryo. Tissues such as root cap, stele, cortex and root epidermis are clearly seen around the radicle. Rice seeds were imbibed overnight, fixed and stained by Propidium Iodide. After dehydration and clearing, the optical section image was taken by confocal laser scanning microscopy.
