2. Informatics Program Outlines

Informatics is a scientific field that studies many problems related to information extensively and synthetically. Informatics started as a field based on a core of traditional information science, information engineering and information processing. Now informatics is a multidisciplinary science covering computer science, information technology (IT), artificial intelligence (AI), data sciences, human-machine interfaces, and studies of methods for acquiring and handling information in natural science, humanities, social science, and so on.

Informatics serves as a pillar of all scientific and engineering fields by exploring methods about information, that is, extraction, representation, storing, management, processing, communication, utilization, and update of information. Informatics thus greatly contributes to advanced goals in industry and improvement in human life.

The Informatics Program at SOKENDAI consists of six sub-fields: Foundations of Informatics, Information Infrastructure Science, Software Science, Multimedia Information Science, Intelligent Systems Science, and Information Environment Science. It has a unique education system where National Institute of Informatics (NII) provides an excellent education and research environment for Ph.D. students of the program with rich and advanced IT facilities as well as leading IT researchers. Internationality is also one of the notable strengths of the program; more than 90 students including many foreign students from over ten countries are learning together, and many classes and seminars are conducted in English. Through their daily life in the program, students are able to gain valuable experiences in a multicultural, multilingual environment which will likely help in their future global activities.
